January 16, 2005

RE: AboCom System Inc.

FCC ID: MQ4WUG2670

I have a few comments on this Application. Depending on your responses, kindly understand there may be additional comments.

- 1.) The RF power output on the SAR report does not match the EMC report. A tolerance of just 5% is allowed, but in no case can the value reported in the EMC report exceed that shown in the SAR report. Please review and address.
- 2.) Please identify how the country code is set for this product. Does the user have access to the country code settings or are they set at the factory? If an access point is set for a channel illegal for use in the US, will this product still link?
- 3.) Kindly provide a Block Diagram which will identify the frequencies used and their signal path within this device. You may wish to consider adding Figure 2 from the Operational Description to this Exhibit.

William H. Graff
President and Director of Engineering

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
