

4 TEST REPORTS

- **Test Report to EN 300 220-1**
- **Test Report to ETS 300 683**

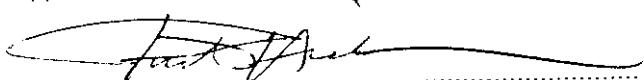

Date: **ESPOO** 07 / 10 1998Page: **1 (25)**Number: **TL 980212**Date of handing in: **24.06.1998****T017 (EN 45001)**

Measured by:

Pekka Kälviäinen B.Sc.(Eng)

Approved by:

Risto Hietanen Product Manager

SORT OF EQUIPMENT: **Radio Modem**

MARKETING NAME:

SATELLINE

TYPE:

3ASd

MANUFACTURER:

SATEL OY

SERIAL NUMBER:

98260001, 98260002, 98260003, 98260004

CUSTOMER:

SATEL Oy

ADDRESS:

Meriniitynkatu 17, FIN-24100 Salo

TELEPHONE:

+358 2 777 7800 / Tapio Malmivaara

TESTSPECIFICATION:

EN 300 220-1

REMARKS:

Five original identical test reports have been prepared.
All have been delivered to the client. This test report is No. 4 (of 5).

Type:	3ASd	Category: AR3
Alignment range:	90 MHz	
Switching range:	One channel	
Measurement Frequencies Tx/Rx:	<div style="display: flex; justify-content: space-around;"> <div style="border: 1px solid black; padding: 5px; border-radius: 10px;"> Equipment 1 and 4 Serial no. 98260001 / 98260004 1) 380.000 MHz 4) 470.000 MHz </div> <div style="border: 1px solid black; padding: 5px; border-radius: 10px;"> Equipment 2 Serial no. 98260002 2) 410.000 MHz </div> <div style="border: 1px solid black; padding: 5px; border-radius: 10px;"> Equipment 3 Serial no. 98260003 3) 440.000 MHz </div> </div>	
Voltages:	Normal 13.5 VDC	Minimum 9.0 VDC
Temperatures:	23.2 to 25.8 °C	- 20 °C (Category: I)
Humidity:	36.5 to 56.5 %	Maximum 30.0 VDC + 55 °C
Carrier power:	0.4 mW (Class: 12)	Antenna: TNC-connector (50 Ω)
Class of emission:	F1D	If frequencies: 77 550 khz, 455 kHz
Number of channels:	1	Production model: No
Channel separation:	25 kHz	Mode of DATA FSK, 19200 bps, direct

The following measurements according to EN 300 220-1 standard have been performed:

3.	Transmitter
3.1	Frequency error
3.2	Carrier power (conducted)
3.3	Effective radiated power (radiated)
3.4.1.2	Analogue signals within the audio bandwidth (FM)
3.4.1.3	Analogue signals above the audio bandwidth (FM)
3.4.2.2	Analogue signals within the audio bandwidth (AM)
3.4.2.3	Analogue signals above the audio bandwidth (AM)
3.5	Adjacent channel power
3.6	Range of modulation bandwidth for wide band equipment (>25 kHz)
3.7.2	Conducted spurious emissions / 3.7.1 a) i)
3.7.3	Spurious emissions (cabinet radiation) / 3.7.1 a) ii)
3.7.4	Spurious emissions (cabinet radiation) / 3.7.1 b)
3.8	Frequency stability under low voltage conditions
3.9	Duty Cycle (*)
9.	Receiver
9.1.2	Conducted spurious emissions / 9.7.1 a) i)
9.1.3	Spurious emissions (cabinet radiation) / 9.7.1 a) ii)
9.1.4	Spurious emissions (cabinet radiation) / 9.7.1 b)
9.2	Spurious response rejection and blocking / desensitization

REMARKS

na: no applicable

APPENDIX

**Application form for testing to ETS 300 220 from the client
Copy**

APPLICATION FORM FOR TESTING TO I-ETS 300 220

The application form shall be used for equipment submitted for type testing in accordance with I-ETS 300 220 intended for the transmission of speech, telemetry, telecommand, etc., over a short range.

The application form shall be completed by the applicant and submitted to a test laboratory accredited in accordance with EN45001 or ISO guide 25 or a national standard conforming to EN45001 or ISO guide 25.

PLEASE READ THE FOLLOWING Notes:**Note (a)**

More than one item of equipment may be required to be submitted for type testing where an equipment needs to be modified to provide connections to facilitate testing, i.e. measurements requiring direct connections to be made. In such cases a second unmodified equipment may be required for radiated i.e. case or cabinet radiation or ERP (effective radiated power) measurements to be performed.

Full details of modifications are to be provided, where applicable.

Note (b)

I-ETS 300 220 allows for variations in frequency range, maximum power, channel separation etc to reflect differing national regulatory requirements. Manufacturers producing equipment to this I-ETS may wish to offer an equipment of the same basic design in a number of different forms with different RF characteristics, such as the frequency range, channel separation, temperature range, transmitter power etc. This is subsequently referred to as a family of equipments. Each equipment in the family must be given a unique Type Designation.

In the case of equipment with different frequency ranges and channel separations, a separate set of test results will be required for each frequency range and each channel separation offered. In the case of equipment with different transmitter powers and temperature ranges, the procedures laid down in I-ETS 300 220 permit use of a single set of test results.

Equipment with differing optional features

If an applicant wishes to obtain type approval, on the basis of a single set of test results for a family of equipments derived from the same basic design, where the equipments in the family have different operational features, such as audio output powers, which are not a requirement of I-ETS 300 220, then the following considerations shall be observed.

i) Any operational feature in hardware or software, which can effect any of the performance parameters (not including signalling), shall be clearly defined by the applicant at the time of application. This will enable the National Regulatory Authority to determine whether further testing is needed.

ii) It is further intended to provide systematic guidance on the above in an ETSI Technical Report, to be produced in consultation with CEPT WGRR. It is intended to periodically revise the Technical Report as new operational features are developed.

Note (c) - Speech part of the equipment

In the case of combined full bandwidth analogue speech/full bandwidth non-speech equipment, adjacent channel power (Subclause 7.5), shall be measured for both combinations.

Note (d)**ACCESSORIES**

It is the applicants responsibility when submitting equipment(s) to the test laboratory to provide appropriate connectors or alternative coupling arrangements to facilitate the connection of test equipment by the test laboratory to the equipment under test (E.U.T.). This should enable:

- i) access to the equipment RF power output (transmitter);
- ii) operation of the equipment to transmit (transmitter);
- iii) access to the equipment modulator input;
- iv) access to the analogue output of the RF part;
- v) coupling arrangement (e.g. optical or acoustic coupling for equipment having no external audio connection);
- vi) means of connecting the equipment to an external power supply.
- vii) means of turning the modulation and signalling on/off, if applicable.

Note (e)

For type approval to be granted on the basis of tests conducted on a pre-production model, that model must be manufactured to the same production drawings and manufacturer's specification as the later production models.

Where this is not the case the national regulatory authority reserves the right to require either partial or full type testing to be carried out on the final production models.

Note (f)

It is the applicant's responsibility to ensure that the equipment meets all the regulatory requirements for marking in the country where type approval is being sought.

APPLICANT'S DETAILS	
CATEGORY OF APPLICANT (please tick relevant box opposite)	(a) <input checked="" type="checkbox"/> MANUFACTURER (b) <input type="checkbox"/> IMPORTER (c) <input type="checkbox"/> DISTRIBUTOR (d) <input type="checkbox"/> AGENT
COMPANY NAME	Sateli Oy
ADDRESS	Meriniitynkatu 17 FIN-24100 Salo
NAME FOR CONTACT PURPOSES	Tapio Malmivaara
TELEPHONE No:	+358 2 777 7891
TELEX No:	+358 2 777 7810

If box (a) is ticked and the equipment is manufactured at a different address to that of the applicant, or if box (b), (c) or (d) is ticked, complete details in the box below with respect to the manufacturer.

MANUFACTURER'S DETAILS	
COMPANY NAME
ADDRESS
NAME FOR CONTACT PURPOSES
TELEPHONE No:
TELEX No:

INTENDED USE (For information only)	
Details	wireless data communication
Product brochures included	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No

TYPE DESIGNATION
(See Note 1)

The type designation may be either a single alphanumeric code or an alphanumeric/code divided into two parts.

Please fill in

EITHER TYPE DESIGNATION AS A SINGLE ALPHANUMERIC CODE:

SATELLINE-3ASd

OR TYPE DESIGNATION IN TWO PARTS:

1. EQUIPMENT SERIES No. (See Note 2)

2. EQUIPMENT SPECIFIC No. (See Note 3)

Note 1 This is the manufacturer's numeric or alphanumeric code or name that is specific to a particular equipment. It may contain information in coded form on the characteristics of the equipment e.g. frequency, power. The manufacturer is free to choose the form of the type designation.

Note 2 This is the number, code or trade name used by the manufacturer to describe a series or 'family' of equipment of substantially the same mechanical and electrical construction which will include a number of related equipments. This number is often referred to as the "model no.".

Note 3 This is the manufacturer's identification number given to a specific equipment in the series or 'family' of equipments. It is often referred to as the "identification number".

TYPE APPROVAL TO OTHER ETS

? Has the equipment been previously type approved to any other ETS or I-ETS

Yes

No

If Yes please provide details of the previous type approval.

.....
.....

EXTREME TEMPERATURE RANGE
(over which equipment is to be type tested)

Category I (General)

-20°C to +55°C

Category II (Portable equipments) -10°C to +55°C

CONSTRUCTION OF EQUIPMENT

Single unit (See Note 4)

Multiple units

If multiple units describe each one clearly

Note 4

"UNIT" means a physically separate item of the equipment. The equipment under test may consist of two separate units. For example a car alarm with automatic paging consists of two units; the portable transceiver and associated mobile transceiver.

In this particular case additional sheets covering the transmitter and receiver characteristics for both units would be required, if unit 1 and unit 2 are covered by the same TYPE DESIGNATION.

AUTOMATIC EQUIPMENT SWITCH OFF

If the equipment is designed to automatically switch off at a predetermined voltage level which is higher or lower in value than the battery minimum voltage calculated values this shall be clearly stated.

Applies Cut-off voltage

Does not apply

DUPLEX OPERATION

Is the equipment intended for

Duplex operation

Yes

No

Is the equipment fitted with separate transmitter and receiver antenna sockets

Yes

No

Is the equipment fitted with a duplex filter as an integral part of the equipment with a single antenna connection socket

Yes

No

Is the duplex filter externally fitted and connected to the main equipment by co-axial cable(s)

Yes

No

If Yes state type and make of duplex filter

.....

ALIGNMENT RANGE

The definition of the alignment range AR1 and AR2 are given in subclauses 4.1.2 and 4.1.3 of the Standard. The applicant should ensure that the sample equipment(s) submitted are operational on the appropriate frequencies as given in subclauses 4.1.5 through to 4.1.11 and tick the appropriate box.

4.1.5 One sample single frequency equipment of category AR1

or 4.1.6 Three samples of single frequency equipments of category AR2

or 4.1.7 One sample two frequency equipment of category AR1

or 4.1.8 Three samples of two frequency equipment of category AR2

or 4.1.9 One sample multifrequency equipment of category AR1

or 4.1.10 Three samples of multifrequency equipment of category AR2

or 4.1.11 One sample of multifrequency equipment of category AR2 where the switching range equals the alignment range

If more than one option of the equipment is being submitted with different Type Designations, one or three samples, as appropriate, of each version shall be submitted for testing.

FREQUENCY IDENTIFICATION

Each equipment, whether one or more submitted for tests shall carry clear identification (such as a serial number), together with the frequency identification displayed on the equipment.

Equipment identification eg serial number	Channel No. (if applicable)	Transmit Nominal Freq. MHz	Receive Nominal Freq. MHz
98260001		380.0000	380.0000
98260002		410.0000	410.0000
98260003		440.0000	440.0000
98260004		470.0000	470.0000

OTHER ITEMS SUPPLIED

Spare batteries
e.g. (portable equipment) Yes No

Battery charging device Yes No

Special tools for dismantling equipment Yes No

Encoder/Decoder Yes No

Test interface box (if applicable) Yes No

Full documentation on equipment:

Operating instructions Yes No

User manual Yes No

Circuit diagrams Yes No

P.C. board layout, including
component positioning Yes No

Parts list Yes No

Other Yes No

If Yes, please specify

..... brochure

DECLARATION

Are the equipments submitted representative production models?

 Yes No

If not are the equipments pre-production models?

 Yes No

If pre-production equipments are submitted will the final production equipments be identical in all respects with the equipment tested

 Yes No

If no, supply full details of differences:

.....

I hereby declare that I am entitled to sign on behalf of the applicant and that the information supplied is correct and complete.

1. General

The equipment under test (EUT) was a Radio modem. The purpose of the performed tests was to see if in regard to these tests the EUT fulfils the EMC requirements defined in the EC Council Directive 89/336/EC. The tests were performed according to the test specifications ETS 300 683 (June 1997) by using accredited test methods.

2. System Configuration

2.1 Test set-up

Equipment under test (EUT):

- Radio modem, type Satelline-3ASd, S/N: 98260003 and 98260005

Peripheral devices:

- Rohde & Schwarz RF high power attenuator, attenuation 30 dB, type RBU, S/N: 300706/53
- Rohde & Schwarz variable attenuator 0-2000 MHz, attenuation 0-140 dB, type DPU, S/N: 180433-50
- Toshiba microcomputer, type S300CDS, S/N: 28378612E PCN0085, used for generating the data to the EUT during the immunity tests
- Olivetti microcomputer, type 860C, S/N: A5049F 0502259, used for the monitoring of the EUT during the immunity tests
- Battery 12 V, type Biltema, S/N: -

Cables:

From	To	Type	Length [m]
Battery	EUT (transmitting device)	Untwisted pair, unshielded	1.8
Toshiba microcomputer	EUT (transmitting device)	Serial cable, unshielded	1.3
EUT (transmitting device)	Attenuator 30 dB	Coaxial cable	1.2
Variable attenuator	EUT (receiving device)	Coaxial cable	1.2
Battery	EUT (receiving device)	Untwisted pair, unshielded	0.5
EUT (receiving device)	Olivetti microcomputer	Serial cable, unshielded	1.8

Operating voltage of the EUT:

12 V DC

2.2 Operating conditions and monitoring of the EUT

Immunity tests:

The EUT was tested as a system. For the duration of the tests the EUT was set to a test mode of operation, in which the transmitting device was transmitting data sent by the Toshiba microcomputer to the receiving device. The attenuation between the devices was adjusted to 60 dB.

The monitoring of the EUT was performed visually by watching the received data displayed by the Olivetti microcomputer.

2.3 Performance criteria for immunity tests

Performance criterion A:

The EUT shall continue to operate as intended during and after the test. No degradation of performance is allowed.

Performance criterion B:

The EUT shall continue to operate as intended after the test. However, moderate degradation of performance is allowed. No change of actual operating state or loss of memory functions is allowed.

3. Test procedures

3.1 Immunity tests

3.1.1 Radiated radio-frequency electromagnetic field immunity test

The test was performed as a compliance test. The test parameters concerned were as follows:

Parameter	Specification
Test method	EN 61000-4-3 (1996)
Frequency range	80 - 1000 MHz
Modulation	AM 80% 400 Hz
Sweep	Step: 1 %, Time/step: 3 s
Test level	3 V/m
Performance criterion	A
Site name	EMCEC Oy / Perkkaa
Date of testing	19.02.1999
Test equipment	176, 184, 201, 291, 292, 293, 340, 417
Test conditions	22 °C, 30 % RH

The test was carried out in an absorber-lined shielded room. The EUT was placed on a non-conductive turntable 1 m above the floor absorbers. The distance between the transmitting log-periodic antenna and the EUT was 2.06 m measured from the tip of the antenna (see photograph 1). The communication link was set up by using a coaxial cable (see photograph 2). The EUT cables were arranged into a position anticipated to be the worst-case. The test was performed with the field generating antenna facing each of the four sides of the EUT. Both vertical and horizontal polarisations were tested. The field strength was checked with a calibrated field sensor. The uniformity of field has been calibrated.

3.1.2 Radiated radio-frequency electromagnetic field (GSM) immunity test

The test was performed as a compliance test. The test parameters concerned were as follows:

Parameter	Specification
Test method	ENV 50204 (1995)
Frequency range	900 \pm 5 MHz
Modulation	Keyed carrier, repetition frequency 200 Hz, duty cycle 50%
Sweep	Step: 1 %, Time/step: 3 s
Test level	3 V/m
Performance criterion	A
Site name	EMCEC Oy / Perkkaa
Date of testing	19.02.1999
Test equipment	176, 184, 201, 291, 292, 293, 340, 417
Test conditions	22 °C, 30 % RH

The test was carried out in an absorber-lined shielded room. The EUT was placed on a non-conductive turntable 1 m above the floor absorbers. The distance between the transmitting log-periodic antenna and the EUT was 2.06 m measured from the tip of the antenna (see photograph 1). The communication link was set up by using a coaxial cable (see photograph 2). The EUT cables were arranged into a position anticipated to be the worst-case. The test was performed with the field generating antenna facing each of the four sides of the EUT. Both vertical and horizontal polarisations were tested. The field strength was checked with a calibrated field sensor. The uniformity of field has been calibrated.

3.1.3 Electrostatic discharge (ESD) immunity test

The test was performed as a compliance test. The test parameters concerned were as follows:

Parameter	Specification
Test method	EN 61000-4-2 (1995)
Test level	Contact discharge: \pm 2 and \pm 4 kVp Air discharge: \pm 2, \pm 4 and \pm 8 kVp
Performance criterion	B
Site name	EMCEC Oy / Perkkaa
Date of testing	22.02.1999
Test equipment	184, 349, 405, 406, 409
Test conditions	24 °C, 31 % RH

The test was carried out inside a shielded room. A horizontal coupling plane (HCP) was placed on a non-conductive table 0.8 m high. The EUT was placed on the table and it was isolated from the HCP by means of PVC-sheets. Indirect contact discharges were applied on the EUT by discharging to a vertical coupling plane (VCP, see photograph 3) and HCP. Direct contact discharges were applied on the conductive parts of the EUT and air discharges were applied on the non-conductive parts of the EUT (see photograph 4). At least 10 discharges of both polarities were applied on each test point at each test level.

3.1.4 Conducted radio-frequency common mode immunity test

The test was performed as a compliance test. The test parameters concerned were as follows:

Parameter	Specification
Test method	EN 61000-4-6 (1996)
Frequency range	0.150 - 80 MHz
Modulation	AM 80% 1 kHz
Sweep	0.150 – 5 MHz: Step: 50 kHz, Time/step: 3 s 5 – 80 MHz: Step: 1 %, Time/step: 3 s
Test level	3 Vemf
Performance criterion	A
Site name	EMCEC Oy / Perkkaa
Date of testing	22.02.1999
Test equipment	38, 56, 184, 294, 299, 326, 349, 366
Test conditions	24 °C, 31 % RH

The test was carried out inside a shielded room. The EUT was placed on a non-conductive support 0.1 m above the reference ground plane (RGP). An EM-clamp was used to realize a defined impedance for the test signal and to prevent the test signal from reaching the assisting equipment (see photograph 5). The EUT cables were placed 50 mm above the RGP. The distance between the CDNs and the EUT was 0.3 m.

3.1.5 Electrical fast transients (EFT/B) immunity test

The test was performed as a compliance test. The test parameters concerned were as follows:

Parameter	Specification
Test method	EN 61000-4-4 (1995)
Test pulse	5 (Tr) / 50 (Th) ns, repetition frequency 5 kHz, duration 1 minute
Test level	Signal port: $\pm 1.0 \text{ kVp}$
Performance criterion	B
Site name	EMCEC Oy / Perkkaa
Date of testing	22.02.1999
Test equipment	184, 224, 225, 348
Test conditions	24 °C, 31 % RH

The test was carried out inside a shielded room. The EUT was placed on non-conductive table 0.8 m above the RGP. The capacitive coupling clamp was used to test the signal cable of the EUT (see photograph 6). The distance between the generator or the clamp and the EUT was 0.5 - 1.0 m. The cable between the generator and the clamp was 1.0 m in length.

3.1.6 Transients and surges in vehicular environment immunity test

The test was performed as a compliance test. The test parameters concerned were as follows:

Parameter	Specification
Test method	ISO 7637-1 (1990)
Test pulse	3a: duration 1 h, cycle time 100 ms 3b: duration 1 h, cycle time 100 ms 4: 25 ms (t_s) / 5 s (t_s), five pulses
Test level	Pulse 3a: -50 V (level 2) Pulse 3b: +50 V (level 2) Pulse 4: -5 V / -2.5 V (level 2)
Performance criterion	B
Site name	EMCEC Oy / Perkkaa
Date of testing	02.02.1999
Test equipment	184, 347, 348
Test conditions	22 °C, 30 % RH

The test was carried out inside a shielded room. The EUT was placed on a non-conductive support 0.8 m above the RGP. The cable between the test generator and the EUT was 0,5 m in length.

4. Test results

4.1 Immunity tests

4.1.1 Radiated radio-frequency electromagnetic field immunity test

Standby mode of operation:

Polarisation	Frequency MHz	Test level V/m	Remarks	Conclusion Pass/Fail
Vertical	80 – 1000	3	–	Pass
Horizontal	80 – 1000	3	–	Pass

Receiving / transmitting mode of operation:

Polarisation	Frequency MHz	Test level V/m	Remarks	Conclusion Pass/Fail
Vertical	80 – 1000	3	–	Pass
Horizontal	80 – 1000	3	–	Pass

4.1.2 Radiated radio-frequency electromagnetic field (GSM) immunity test

Standby mode of operation:

Polarisation	Frequency MHz	Test level V/m	Remarks	Conclusion Pass/Fail
Vertical	890 – 960	3	–	Pass
Horizontal	890 – 960	3	–	Pass

Receiving / transmitting mode of operation:

Polarisation	Frequency MHz	Test level V/m	Remarks	Conclusion Pass/Fail
Vertical	890 – 960	3	–	Pass
Horizontal	890 – 960	3	–	Pass

4.1.3 Electrostatic discharge (ESD) immunity test

Standby mode of operation:

Discharge mode	Test points	Test level kVp	Remarks	Conclusion Pass/Fail
Direct contact	Conductive parts of the EUT	±2 and ±4	–	Pass
Indirect contact	HCP and VCP	±2 and ±4	–	Pass
Air	Non-conductive parts of the EUT	±2, ±4 and ±8	–	Pass

Receiving / transmitting mode of operation:

Discharge mode	Test points	Test level kVp	Remarks	Conclusion Pass/Fail
Direct contact	Conductive parts of the EUT	± 2 and ± 4	—	Pass
Indirect contact	HCP and VCP	± 2 and ± 4	—	Pass
Air	Non-conductive parts of the EUT	± 2 , ± 4 and ± 8	—	Pass

4.1.4 Conducted radio-frequency common mode immunity test

Standby mode of operation:

Port	Frequency MHz	Test level Vemf	Remarks	Conclusion Pass/Fail
Signal	0.150 - 80	3	—	Pass

Receiving / transmitting mode of operation:

Port	Frequency MHz	Test level Vemf	Remarks	Conclusion Pass/Fail
Signal	0.150 - 80	3	—	Pass

4.1.5 Electrical fast transients (EFT/B) immunity test

Standby mode of operation:

Port	Test level kVp	Remarks	Conclusion Pass/Fail
Signal	± 0.25 , ± 0.5 and ± 1.0	—	Pass

Receiving / transmitting mode of operation:

Port	Test level kVp	Remarks	Conclusion Pass/Fail
Signal	± 0.25 , ± 0.5 and ± 1.0	—	Pass

4.1.6 Transients and surges in vehicular environment immunity test

Standby mode of operation:

Port	Pulse	Remarks	Conclusion Pass/Fail
DC power input	3a	—	Pass
	3b	—	Pass
	4	—	Pass

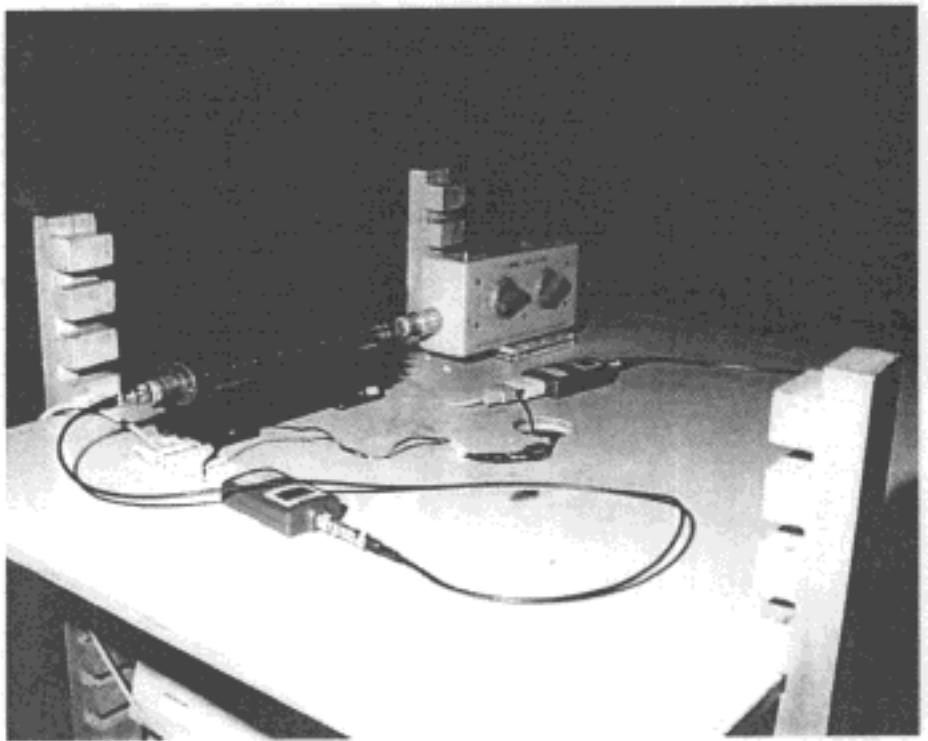

Receiving / transmitting mode of operation:

Port	Pulse	Remarks	Conclusion Pass/Fail
DC power input	3a	—	Pass
	3b	—	Pass
	4	—	Pass
