

Response Letter

SUBJECT: ASUSTEK COMPUTER INC.

FCC ID: MSQ-1520

REFERENCE: JOB 3046TC7

1. The "Rated RF Power Output" that is EIRP was measured under ambiguous situation. We have confirmed the measurement value again and would like to make change to maximum 1.97W EIRP for the EUT. Report and 731 form have be modified accordingly.
2. We have corrected the value and resubmitted it again.
3. We have corrected headings to "EIRP" in our report.
4. We also attached a confirmation letter form customer to illustrate the difference between the two models. It is to say: "They share the same hardware and OS and only with different application". P550 is model number for applicant "ASUS" and 1520 is model number for applicant "Vodafone". There is no concern regarding WCDMA operation.
5. The EUT has Band I function which is not support by US market. We cited base Station Simulator with "WCDMA" is basically comply to EUT functionality.
6. The applied models "P550" and "1520" are similar in operational method that is why we only provide with P550 one.
7. As explained in item 5, EUT contains WCDMA function, however, it is not supported by US market.

The above items are our explanation to your concern. We have uploaded this letter with confirmation letter and modified report for your review. Pleas review this application and contact me if you have any hesitation.

Best Regard,

Wayne Kao
