

Dear Tim,

Please find the responses as below:

1. WCDMA for this device is used in band 2100 MHz, not for 850 or 1900 U.S. band.
2. updated and uploaded
3. updated and uploaded, which only allows for channel 1 ~ 11
4. The users can only operate the device on channels 1-11 in U.S., and users can not adjust the channel manually.
5. The power sensor used for the testing is peak power sensor and the power meter has been added in the test report and uploaded.
6. The testing in 3 axis were investigated, only the worst case position were reported.
7. The device does not support VOIP function., so head SAR on WLAN band is not required
8. Yes, BT is expected to function when used in the head position.
9. The device does not support GMRS.

If there is no further issue, please kindly issue the grant today. Thanks a lot.

BR

Daniel
