

Dear Tim,

The antenna just a little bit shape different. Camera is in front of antenna, because its camera need more space, so antenna move 2mm from original position. Customer had check its TRP has no change. Please see attach.

They just change U9 and U13. So they have enough voltage for camera.

Major,

Somewhere in an email back in August, I thought they also mentions an antenna difference or change (what type of change?, Why?).....This appears to be missing. Additionally, they should detail purpose of U9 and U13.

Tim
