## **1 General Information**

### **1.1 Notes**

The purpose of conformity testing is to increase the probability of adherence to the essential requirements or conformity specifications, as appropriate.

The complexity of the technical specifications, however, means that full and thorough testing is impractical for both technical and economic reasons.

Furthermore, there is no guarantee that a test sample which has passed all the relevant tests conforms to a specification.

Neither is there any guarantee that such a test sample will interwork with other genuinely open systems. The existence of the tests nevertheless provides the confidence that the test sample possesses the qualities as maintained and that its performance generally conforms to representative cases of communications equipment.

The test results of this test report relate exclusively to the item tested as specified in 1.5.

The test report may only be reproduced or published in full.

Reproduction or publication of extracts from the report requires the prior written approval of the Worldwide Testing Services(Taiwan) Co., Ltd.

## **1.3 Details of approval holder**

Name:	SOARING TECHNOLOGY CO.,LTD
Street:	1F, No. 34, Chung-Hsing Rd.,
Town:	Hsichih City, Taipei Hsien,
Country:	Taiwan, R.O.C
Telephone:	886-2-26918000
Fax:	886-2-26917000

Registration number: W6M20808-9246-C-1  
FCC ID: MXCSCBX3010-M

## **1.4 Application details**

Date of receipt of test sample: August 08, 2008  
Date of test: from August 08, 2008 to August 20, 2008

## **1.5 General information of Test item**

Type of test item: SOARING TECHNOLOGY CO.,LTD  
Model Number: SCBX-3010-XXXXX  
Multi-listing model number: without  
Transmitting frequency: 88.3 – 90.3 MHz  
Operation mode: simplex  
Modulation Type: FM  
Voltage supply: DC 12 V  
Channel Numbers: 6  
Frequency of selectable channel: 88.3MHz / 88.7MHz / 89.1MHz / 89.9MHz / 90.1MHz / 90.3MHz  
Antenna Type: Wired antenna  
Photos: see Appendix

### **Manufacturer:(if applicable)**

Town: ./.  
Country: ./.

## **1.6 Test standards**

Technical standard :

FCC RULES PART 15 SUBPART B § 15.109 / SUBPART C § 15.203, § 15.209, § 15.239 (2007-10)

Registration number: W6M20808-9246-C-1  
FCC ID: MXCSCBX3010-M

## **2 Technical test**

### **2.1 Summary of test results**

No deviations from the technical specification(s) were ascertained in the course of the tests performed.

or

The deviations as specified in 3 were ascertained in the course of the tests performed.

### **2.2 Test environment**

Temperature:	23 °C
Relative humidity content:	20 ... 75 %
Air pressure:	86 ... 103 kPa
Details of power supply:	DC 12 V

Registration number: W6M20808-9246-C-1  
FCC ID: MXCSCBX3010-M

## **2.4 General Test Procedure**

**POWER LINE CONDUCTED INTERFERENCE:** The procedure used was ANSI STANDARD C63.4-2003 using a 50 $\mu$ H LISN (if necessary). Both lines were observed. The bandwidth of the spectrum analyzer was 10 kHz with an appropriate sweep speed.

**RADIATION INTERFERENCE:** The test procedure used was according to ANSI STANDARD C63.4-2003 employing a spectrum analyzer. For investigated frequency is equal to or below 1GHz, the RBW and VBW of the spectrum analyzer was 100 kHz and 100kHz respectively with an appropriate sweep speed. For investigated frequency is above 1GHz, both of RBW and VBW of the spectrum analyzer were 1 MHz with an appropriate sweep speed. The analyzer was calibrated in dB above a microvolt at the output of the antenna.

**FORMULA OF CONVERSION FACTORS:** The Field Strength at 3m was established by adding the meter reading of the spectrum analyzer (which is set to read in units of dB $\mu$ V) to the antenna correction factor supplied by the antenna manufacturer. The antenna correction factors are stated in terms of dB.

Example:

Freq (MHz)	METER READING + ACF + CABLE LOSS (to the receiver) = FS
33	20 dB $\mu$ V + 10.36 dB + 6 dB = 36.36 dB $\mu$ V/m @3m

The EUT was placed on a table 80 cm high and with dimensions of 1m by 1.5m (non metallic table) and arranged according to ANSI C63.4-2003 Section 13.1.2. The table used for radiated measurements is capable of continuous rotation. The spectrum was scanned from 30 MHz to the frequency specified as follows:

- (1) If the intentional radiator operates below 10 GHz: to the tenth harmonic of the highest fundamental frequency or to 40 GHz, whichever is lower.
- (2) If the intentional radiator operates at or above 10 GHz and below 30 GHz: to the fifth harmonic of the highest fundamental frequency or to 100 GHz, whichever is lower.
- (3) If the intentional radiator operates at or above 30 GHz: to the fifth harmonic of the highest fundamental frequency or to 200 GHz, whichever is lower, unless specified otherwise elsewhere in the rules.
- (4) If the intentional radiator contains a digital device, regardless of whether this digital device controls the functions of the intentional radiator or the digital device is used for additional control or function purposes other than to enable the operation of the intentional radiator, the frequency range shall be investigated up to the range specified in paragraphs (a)(1)-(a)(3) of this section or the range applicable to the digital device, as shown in paragraph (b)(1) of this Section, whichever is the higher frequency range of investigation.

For hand-held devices, a exploratory test was performed with three (3) orthogonal planes to determine the highest emissions.

Measurements were made by Worldwide Testing Services(Taiwan) Co., Ltd. at the registered open field test site located at No.5-1, Shuang Sing Village, LiShuei Rd., Wanli Township, Taipei County 207, Taiwan (R.O.C.) The Registration Number: **930600**.

When an emission was found, the table was rotated to produce the maximum signal strength. At this point, the antenna was raised and lowered from 1m to 4m. The antenna was placed in both the horizontal and vertical planes.

Registration number: W6M20808-9246-C-1  
FCC ID: MXCSCBX3010-M

When the radiated emission limits are expressed in terms of the average value of the emission, and pulsed operation is employed, the measurement field strength shall be determined by averaging over one complete pulse train, including blanking intervals, as long as the pulse train does not exceed 0.1 seconds. As an alternative (provided the transmitter operates for longer than 0.1 seconds) or in cases where the pulse train exceeds 0.1 seconds, the measured field strength shall be determined from the average absolute voltage during a 0.1 second interval during which the field strength is at its maximum value.

The formula is as follows:

Average = Peak + Duty Factor

Duty Factor =  $20 \log (\text{dwell time}/T)$

$T = 100\text{ms}$  when the pulse train period is over 100 ms or the period of the pulse train.

Modified Limits for peak according to 15.35 (b) = Max Permitted average Limits + 20dB

Registration number: W6M20808-9246-C-1  
FCC ID: MXCSCBX3010-M

## 2.5 Product Description and System Test Configuration

### 2.5.1 Production Description

This Equipment Under Test (EUT) is a Signal shifter which can be operated from 88.3 to 90.3 MHz. The main function of this EUT is used to encode analog signal to become FM code, and control the transmitter frequency to the radio receivers and broadcast. Because of this function, it could be used to read CD/DVD disc to play music. This transmitter is fed by 12V car power supply.

### 2.5.2 System Test Configuration

#### 2.5.2.1 Supported Ancillary Equipment

Item	Name of Equipment	Manufacturer	Model Number	FCC ID	Note
1	DVD Player	INVISION	SSLM7BA1	N/A	N/A
2	DVD Player	INVISION	SSLM7BB1	N/A	N/A

#### 2.5.2.2 The relevant cables of Supported Ancillary Equipment

Item	Name of Cables	Shielded Used	Ferrite Used	Length	Note
C1	Data cable	Non-Shielded	N/A	0.6m	Detachable
	Data cable	Non-Shielded	N/A	0.6m	Detachable
C2	Data cable	Non-Shielded	N/A	0.6m	Detachable
	Data cable	Non-Shielded	N/A	0.6m	Detachable
C3	Power line	Non-Shielded	N/A	1.7m	Detachable

#### 2.5.2.3 Setup Configuration

#### 2.5.2.4 Description of Test Mode

The system was configured for testing in a typical arrangement as the manufacturer's declaration. During the test, the CD/DVD player played program and set the volume to the maximum level. There was no special software to be exercised during the test.

There are six channels on EUT, and the operating frequency range of EUT is from 88.3 MHz to 90.3 MHz. We choose the middle channel (89.1 MHz) for main final test, except choosing the lowest channel (88.3 MHz) for Band Edge testing.

Registration number: W6M20808-9246-C-1  
FCC ID: MXCSCBX3010-M

**3 Test results (enclosure)**

TEST CASE	Required	Test passed	Test failed
Emission bandwidth 15.239 (a)	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Band Edge Measurement 15.239 (a)	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Carrier (Field Strength) 15.239 (b)	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Spurious Emissions 15.239 (c)	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Power Line Conducted Emission 15.207	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

***Note: The lowest channel is 88.3 MHz and the highest channel is 90.3 MHz. The tuning control were manually adjusted to verify maximum tuning range.***

(The follows is intended to leave blank.)

Registration number: W6M20808-9246-C-1  
FCC ID: MXCSCBX3010-M

### **3.1 Emission Bandwidth**

FCC Rule: 15.239(a)

Test condition		Detector	Bandwidth (kHz)	Limit (kHz)
$T_{nom} = 23^{\circ}C$	$V_{nom} = 12\ V$	Peak	95.69138277	200

Limit: 15.239(a)

Emissions from the intentional radiator shall be confined within a band 200 kHz wide centered on the operating frequency. The 200 kHz band shall lie wholly within the frequency range of 88-108 MHz.

Test equipment used: ETSTW-RE 003, ETSTW-RE 004, ETSTW-RE 029, ETSTW-RE 042

Explanation: See attached diagrams as Appendix.

Registration number: W6M20808-9246-C-1  
FCC ID: MXCSCBX3010-M

### **3.2 Band Edge Measurement**

FCC Rule: 15.239(a)

Channel	Frequency MHz	Detector	Test Results (dB $\mu$ V/m)	Limit (dB $\mu$ V/m)
Lower Band-edge	88.3	Peak	19.26	40
Upper Band-edge	90.3	Peak	--	40

Test equipment used: ETSTW-RE 003, ETSTW-RE 004, ETSTW-RE 029, ETSTW-RE 042

Explanation: Before testing, the tuning control were manually adjusted to verify maximum tuning range. The lowest channel is 88.3 MHz and the highest channel is 90.3 MHz.  
For Band edge Measurement, the Upper Band-edge is not required because the highest operational frequency ( 90.3 MHz ) is much far from the 108 MHz. See attached diagrams as Appendix.

Registration number: W6M20808-9246-C-1  
FCC ID: MXCSCBX3010-M

## **3.3 Carrier ( Field Strength)**

FCC Rule: 15.239(b) , 15.35

Model: SCBX-3010-XXXXX      Date: 2008/8/15  
Mode:      Temperature: 26 °C      Engineer: Brian  
Polarization: Horizontal      Humidity: 60 %

Frequency (MHz)	Reading (dBuV)	Detector	Factor (dB)	Result (dBuV/m)	Limit (dBuV/m)	Margin (dB)	Table Degree (Deg.)	Ant. High (cm)
89.095	31.77	peak	10.45	42.22	47.90	-5.68	230	150

Polarization: Vertical

Frequency (MHz)	Reading (dBuV)	Detector	Factor (dB)	Result (dBuV/m)	Limit (dBuV/m)	Margin (dB)	Table Degree (Deg.)	Ant. High (cm)
89.095	31.99	peak	10.45	42.44	47.90	-5.46	215	150

Limit:

15.239(b)

The field strength of any emissions within the permitted 200 kHz band shall not exceed 250 microvolts/meter ( 47.90 dBuV/m ) at 3 meters.

Test equipment used: ETSTW-RE 003, ETSTW-RE 004, ETSTW-RE 029, ETSTW-RE 042

Explanation: In this case, the average limit is met when using a peak detector, the EUT shall be deemed to meet both limits of peak and average and measurement with the average detector is unnecessary. See attached diagrams as Appendix.

Registration number: W6M20808-9246-C-1  
FCC ID: MXCSCBX3010-M

## 3.4 Spurious Emission

FCC Rules: 15.239 (c), 15.209

Radiated emission measurements were performed from 30 MHz to 1000 MHz.

For radiated emission tests, the analyzer setting was as followings:

Frequency  $\leq$  1 GHz, RBW:100 kHz, VBW: 100 kHz (Peak measurements)

Frequency  $>$  1 GHz, RBW: 1 MHz, VBW: 1 MHz (Peak measurements)

Frequency  $>$  1 GHz, RBW:1 MHz, VBW: 10Hz (Average measurements)

The peak and average spurious emission plots was measured with the average limits.

In the Table being listed the critical peak and average value an exhibit the compliance with the above calculated Limits.

### Summary table with radiated data of the test plots

- Note**
1. Correction Factor = Antenna factor + Cable loss - Preamplifier
  2. The formula of measured value as: Test Result = Reading + Correction Factor
  3. Detector function in the form : PK = Peak, QP = Quasi Peak, AV = Average
  4. All not in the table noted test results are more than 20 dB below the relevant limits.
  5. See the attached diagram as appendix.

Registration number: W6M20808-9246-C-1  
FCC ID: MXCSCBX3010-M

Limits: 15.209

Frequency of Emission (MHz)	Field strength (microvolts/meter)	Field Strength (dB microvolts/meter)
30 – 88	100	40.0
88 – 216	150	43.5
216 – 960	200	46.0
Above 960	500	54.0

Test equipment used: ETSTW-RE 003, ETSTW-RE 004, ETSTW-RE 017, ETSTW-RE 028,  
ETSTW-RE 029, ETSTW-RE 030, ETSTW-RE 042, ETSTW-RE 043,  
ETSTW-RE 044

Registration number: W6M20808-9246-C-1  
FCC ID: MXCSCBX3010-M

## **3.5 Power Line Conducted Emission**

For an intentional radiator which is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC line on any frequency or frequencies within the band 150 kHz to 30 MHz shall not exceed the limits in the table bellows with this provision shall be based on the measurement of the radio frequency voltage between each power line and ground at the power terminals.

This measurement was transact first with instrumentation using an average and peak detector and a 10 kHz bandwidth. If the peak detector achieves a calculated level, the measurement is repeated by an instrumentation using a quasi-peak detector.

### **Limits:**

Frequency of Emission (MHz)	Conducted Limit (dBuV)	
	Quasi Peak	Average
0.15-0.5	66 to 56	56 to 46
0.5-5	56	46
5-30	60	50

Test equipment used: ETSTW-CE 001, ETSTW-CE 003, ETSTW-CE 004, ETSTW-CE 006

Explanation: This test is not required because there is no AC power line or signal line for this EUT.

## **Appendix**

### **A Measurement diagrams**

1. Emission Bandwidth
2. Band Edge Measurement
3. Carrier Field Strength
4. Spurious Emissions

### **B Photos**

1. External Photos
2. Internal Photos
3. Set Up Photo of Radiated Emission

Registration number: W6M20808-9246-C-1  
FCC ID: MXCSCBX3010-M

## Emission Bandwidth

Registration number: W6M20808-9246-C-1  
FCC ID: MXCSCBX3010-M

## Band Edge Measurement

Registration number: W6M20808-9246-C-1  
FCC ID: MXCSCBX3010-M

## Carrier Field Strength Antenna Polarization H

## Antenna Polarization V

### Note:

1. The attached measurement plots are preliminarily pre-scanned with peak detector for determining the final checking frequencies and are for reference only.
2. The some frequencies may exceed the limit line without the specified detectors, but that cannot present the results are failed to the specification of test standard.
3. For corrected test results are listed in the relevant table of Carrier Field Strength test data of this test report.

Registration number: W6M20808-9246-C-1  
FCC ID: MXCSCBX3010-M

## Spurious Emissions Antenna Polarization H

### Note:

1. The attached measurement plots are preliminarily pre-scanned with peak detector for determining the final checking frequencies and are for reference only.
2. The some frequencies may exceed the limit line without the specified detectors, but that cannot present the results are failed to the specification of test standard.
3. For corrected test results are listed in the relevant table of radiated test data of this test report.

Registration number: W6M20808-9246-C-1  
FCC ID: MXCSCBX3010-M

## Antenna Polarization V

### Note:

1. The attached measurement plots are preliminarily pre-scanned with peak detector for determining the final checking frequencies and are for reference only.
2. The some frequencies may exceed the limit line without the specified detectors, but that cannot present the results are failed to the specification of test standard.
3. For corrected test results are listed in the relevant table of radiated test data of this test report.
