**FCC ID#** MXF-M940103AG47  
**Correspondence Reference Number:** 29025  
**731 Confirmation Number:** EA696941  
**Date of Original E-mail:** 6/11/2005

The responses are as follows:

- 1) Please submit internal or external photos or sketches with callouts showing as-installed antenna locations, or give pointer to location if info is already in filing.

**Response:**

1) Only in the appendix A of SAR report has been marked the antenna position. But we changed it in a clearly way. Chapter 4.1 of the test report has been modified to state the "antenna location".

2) Tablet edge in contact with phantom may need SAR test if that represents some normal or expected use position, e.g., device has display orientations (0/180 portrait, 0/180 landscape) which allow regular contact with torso or upper arm when cradled in forearm or lapheld. For high-output channels, please submit SAR if appropriate.

**Response:**

2) Addition test for tablet edge position (edge of EUT contact to phantom with 0mm) has been completed. So we revised the test report and correct the SAR value in the user's manual.
