

LTE Band 41, CB: 20MHz

3.4 Channel Edge

3.4.1 Limit of Channel Edge

For mobile digital stations, the attenuation factor shall be not less than $40 + 10 \log (P) dB$ on all frequencies between the channel edge and 5 megahertz from the channel edge, $43 + 10 \log (P) dB$ on all frequencies between 5 megahertz and X megahertz from the channel edge, and 55 + 10 log (P) dB on all frequencies more than X megahertz from the channel edge, where X is the greater of 6 megahertz or the actual emission bandwidth as defined in paragraph (m)(6) of this section. In addition, the attenuation factor shall not be less that $43 + 10 \log (P) dB$ on all frequencies between 2490.5 MHz and 2496 MHz and 55 + 10 log (P) dB at or below 2490.5 MHz

3.4.2 Test Procedures

For Limit: $40 + 10\log(P)$ and $43 + 10\log(P)$

- 1 Set RBW = $110 \sim 390$ kHz, VBW = $300 \sim 1600$ kHz for channel bandwidth $5 \sim 20$ MHz, detector = RMS, sweep time = auto
- 2 Use channel power measurement function of spectrum analyzer to integrate power over necessary bandwidth.

For Limit: $55 + 10\log(p)$

- 1 Set RBW = 1MHz, VBW= 3MHz detector = RMS, sweep time = auto.
- 2 Record the max trace value and capture the test plot.

3.4.3 Test Setup

3.4.4 Test Result of Band Edge

LTE Band 41, CB: 5MHz
