

RE: Hyperlink Technologies

FCC ID: MYF-G11FNFCX

The following is in response to the comments made on the above application.

1) We apologize for the confusion, but the reference to 15.247(b) was originally correct. This should be 15.247(b)(4)(iii), not 15.247(b)(3)(iii). The incorrect version of the rules was consulted since this was reviewed during travel. Please correct.

The corrections have been made and new exhibits uploaded.

2) Please clarify table 6-2 to show whether the power was measured at the output of the amplifier or amplifier + filter (antenna input connector). It is believed that it was measured from the combination amplifier + filter from previous discussions. Please clarify.

This has been clarified in the updated Test Report exhibit. Whenever an amplifier is used, the output power is measured using the amplifier + filter.

3) Although the applicant does not provide the PC, compliance to 15.207 is required. Although the reference to the previous application seems reasonable, please provide a copy of the conducted emissions data from the referenced filing. This must be included in order for this application to stand on its own.

Since the original PCMCIA test report is password protected, the entire report has been included as an attestation to our current submittal.
