### <u>User Manual</u>

### Model HA2401-XI-325 FCC ID: MYF-XI-325 IC: 2837A- XI325

### **Interference Statement**

This device complies with Part 15 of the FCC Rules and with RSS-210 of Industry Canada. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

## Warning: Changes or modifications not expressively approved by the party responsible for compliance could void the user's authority to operate the equipment.

The term "IC:" before the radio certification number only signifies that Industry Canada technical specifications were met.

NOTE: This system must be installed by experienced professional installers who are familiar with radio frequency (RF) equipment operation as well as local building and safety codes. Failure to do so may void the Product Warranty, as well as expose the end-user to legal and/or financial liabilities.

### Information to the user

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy. If not installed and used in accordance with the instructions, it may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try and correct the interference by one or more of the following measures:

Reorient or relocate the receiving antenna.

Increase the distance between the equipment and the receiver.

Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.

Consult the dealer or an experienced radio/TV technician for help.

Any changes or modifications of equipment not expressly approved by the manufacturer could void the user's authority to operate the equipment and the company's warranty.

NOTE: Certain high gain antennas are intended for point-to-point or point-tomultipoint applications only. These antennas are clearly identified in the table contained in this manual. Note that +36 dBi may only be exceeded for point-topoint applications as given in 15.247(b). It is the installers responsibility that when using these antennas to ensure that the system is used exclusively for point-to-point operations, and that the antenna may not be co-located with other intentional radiators transmitting the same information". The device and its antenna and must not be co-located or operating in conjunction with any other antenna or transmitter.

The table contained in this manual identifies which antennas are considered "fixed" and which are "mobile". When this device is installed as a fixed-mount application there is a minimum required separation distance of 100 cm between the antenna and all persons during normal operation. All mobile antennas must be mounted at a minimum distance of 20 cm from users.

### Router Installation:

Conduct a Site Survey to determine the best location for the system. Once located, install the Router in an appropriate location. Follow the Router mounting instructions for specific mounting details.

Open the access cover by depressing the two tabs. Slide the PC Card into the PC Card Slot and plug in the pigtail cable as shown. Then replace the access cover:

Connect the Pigtail Cable between the PC Card and the Amplifier/DC Injector input.

### Install the Antenna

NOTE: The antenna system shall be installed ONLY by experienced antenna installers who are familiar with local building and safety codes, and wherever necessary have been licensed by appropriate government regulatory bodies. Failure to do so may void the Product Warranty, as well as expose the end-user to legal and/or financial liabilities. Hyperlink Technologies, its agents, resellers or distributors, are not liable for injury, damage, or violation of government regulations that may arise from failing to comply with the guidelines described in this document.

Mount the antenna according to the specific installation instructions for the model you are installing. When choosing the antenna site you must observe the following exposure limits:

The table contained in Appendix B of this manual identifies which antennas are considered "fixed" and which are "mobile". When this device is installed as a fixed-mount application there is a minimum required separation distance of one 100 cm between the antenna and all persons during normal operation. All mobile antennas must be mounted at a minimum distance of 20 cm from users.

Once the antenna is installed connect the antenna to the amplifier using the antenna cable.

### **Configuring the Wireless Router**

Connect to Unit with a cross-over cable to your PC or through a Switch (HUB) with straight cables. Apply power to the Router unit. Check the diagnostic lights to ensure proper connection. You should now be ready to configure the Router.

### Launch the Network Configurator Utility

Click on File, Open Remote Config

### Security Settings

You could Click next on Security and select encryption at this time (Not required for basic configuration, implies 15-20% lower performance).

Click on OK to accept changes and return to Main Menu.

13. Click on Setup – System Access setup (or the Tab), select same Pass Phrase for all the units on your system. Click OK to accept changes.

### **Important Information**

Your wireless system has been installed and configured by an RF professional to comply with FCC Part 15 regulations. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the installation and configuration manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the end user will be required to correct the interference at their own expense.

Modifications to this system including changing the antenna, power setting or transmit channel may result in a non-compliant system, and should only be undertaken by professional installers after reading the Installation Guide for this system.

For further information contact:

Hyperlink Technologies Technical Support Dept. 1201 Clint Moore Road Boca Raton, FL 33487 Email: support@hyperlinktech.com

### SAFETY NOTICE

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment when installed as directed. When this device is installed as a fixed-mount application there is a minimum required separation distance of one (1) meter between the antenna and all persons during normal operation. For mobile mounted antennas, the required separation distance is a minimum of twenty (20) cm between the antenna and all persons during normal use.

Installer: Please post this notice in a prominent location near the transmitter.
