§1.1307 (b) (1) & §2.1091- MAXIMUM PERMISSIBLE EXPOSURE (MPE)

Applicable Standard

According to FCC §15.319(i) and §1.1307(b)(1), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

Frequency Range (MHz)	Electric Field Strength (V/m)	Magnetic Field Strength (A/m)	Power Density (mW/cm ²)	Averaging Time (minute)							
Limits for General Population/Uncontrolled Exposure											
0.3-1.34	614	1.63	*(100)	30							
1.34-30	842/f	2.19/f	*(180/f\2\)	30							
30-300	27.5	0.073	0.2	30							
300-1500	/	/	f/1500	30							
1500-100,000	/	/	1.0	30							

Limits for Maximum Permissible Exposure	(MDE) (81 1310 82 1001)	
Limits for Maximum Permissible Exposure	(WIFE) (§1.1510, §2.1091)	1

f = frequency in MHz

* = Plane-wave equivalent power density

MPE Calculation

Predication of MPE limit at a given distance

$$S = \frac{PG}{4\pi R^2}$$

Where: S = power density (in appropriate units, e.g. mW/cm²);

P = power input to the antenna (in appropriate units, e.g., mW); G = power gain of the antenna in the direction of interest relative to an isotropic radiator

R = distance to the center of radiation of the antenna (appropriate units, e.g., cm);

Channel	Frequency (MHz)	Antenna Gain		Conducted Power		Evaluation	Power	MPE Limit
		(dBi)	(numeric)	(dBm)	(mW)		Density (mW/cm ²)) (mW/cm ²)
Middle	1924.992	0	1	19.80	95.50	20	0.019	1.0

Result: The device meets MPE limit at 20 cm distance.
