MEASUREMENT/TECHNICAL REPORT

Southtel (HK) Ltd. - MODEL: BE-25CHT
FCC ID: N2WBE-25CHT

This report concerns (check one): Original Grant Class II Change

Equipment Type: Cordless Telephone (example: computer, modem, transmitter, etc.)

Deferred grant requested per 47 CFR 0.457(d)(1)(ii)? Yes No

If yes, defer until : _____
date

Company Name agrees to notify the Commission by: _____
date

of the intended date of announcement of the product so that the grant can be issued on that date.

Transition Rules Request per 15.37? Yes No

If no, assumed Part 15, Subpart C for intentional radiator - the new 47 CFR [10-1-96 Edition] provision.

Report prepared by:

INTERTEK TESTING SERVICES

EXHIBIT 1
GENERAL DESCRIPTION

INTERTEK TESTING SERVICES

1.0 **General Description**

1.1 Product Description

The BE-25CHT is a 43/49 MHz 25 Channel Cordless Headset Telephone. The unit is capable of either tone or pulse dialing. The internal power supply's isolation is accomplished through a power transformer having an adequate dielectric rating. The circuit wiring is consistent under the requirement of part 68.

The headset unit consists of a keypad with twelve standard keys (0,...9 *,#), four function keys (Memory, Redial, Flash & Privacy), and one channel switch key. A talk key is provided to control pick/release telephone line in a toggle base.

The circuit description is saved with filename: descri.pdf

Connection between the device and the telephone network is accomplished through the use of USOC RJ11C in the 2-wire loop calling central office line.

INTERTEK TESTING SERVICES

1.2 Related Submittal(s) Grants

This is an Application for Certification of a cordless telephone system. Two transmitters are included in this Application. This specific report details the emission characteristics of each transmitter. The receivers are subject to the verification authorization process, in accordance with 15.101(b). A verification report has been prepared for the receiver sections of each device. The device is also subject to Part 68 Registration.

1.3 Test Methodology

Both AC mains line-conducted and radiated emission measurements were performed according to the procedures in ANSI C63.4 (1992). All measurements were performed in Open Area Test Sites. Preliminary scans were performed in the Open Area Test Sites only to determine worst case modes. For each scan, the procedure for maximizing emissions in Appendices D and E were followed. All Radiated tests were performed at an antenna to EUT distance of 3 meters, unless stated otherwise in the **"Justification Section"** of this Application.

1.4 Test Facility

The open area test site and conducted measurement facility used to collect the radiated data is located at Garment Centre, 576 Castle Peak Road, Kowloon, Hong Kong. This test facility and site measurement data have been fully placed on file with the FCC.

INTERTEK TESTING SERVICES

EXHIBIT 2
SYSTEM TEST CONFIGURATION

INTERTEK TESTING SERVICES

2.0 **System Test Configuration**

2.1 Justification

For emission testing, the equipment under test (EUT) was configured for testing in a typical fashion (as a customer would normally use it). During testing, all cables were manipulated to produce worst case emissions. The headset was powered by a fully charged battery.

For the measurements, the EUT is attached to a cardboard box and placed on the wooden turntable. If the base unit attaches to peripherals, they are connected and operational (as typical as possible). The headset is remotely located as far from the antenna and the base as possible to ensure full power transmission from the base. Else, the base is wired to transmit full power without modulation.

The signal is maximized through rotation and placement in the three orthogonal axes. The antenna height and polarization are varied during the search for maximum signal level. The antenna height is varied from 1 to 4 meters. Detector function is in peak mode. Radiated emissions are taken at three meters unless the signal level is too low for measurement at that distance. If necessary, a pre-amplifier is used and/or the test is conducted at a closer distance.

All readings are extrapolated back to the equivalent three meter reading using inverse scaling with distance. Analyzer resolution is 100 kHz or greater. All emissions greater than 20 dB μ V/m are recorded.

Radiated emission measurement were performed from 30 MHz to 1000 MHz.

2.2 EUT Exercising Software

The EUT exercise program used during radiated and conducted testing was designed to exercise the various system components in a manner similar to a typical use.

For emissions testing, the units were setup to transmit continuously to simplify the measurement methodology. Care was taken to ensure proper power supply voltages during testing.

INTERTEK TESTING SERVICES

2.3 Support Equipment List and Description

The FCC ID's for all equipment, plus descriptions of all cables used in the tested system (included inserted cards, which have grants) are:

HARDWARE:

The unit was operated standalone. An AC adapter (provided with the unit) was used to power the device. Its description is listed below.

- (1) AC adapter with two meter unshielded power cord permanently affixed.

CABLES:

- (1) Telecommunication cable with RJ11C connectors (1m, unshielded), terminated

OTHERS:

There are no special accessories necessary for compliance of this product.

INTERTEK TESTING SERVICES

2.4 Equipment Modification

Any modifications installed previous to testing by Southtel (HK) Ltd. will be incorporated in each production model sold/leased in the United States.

No modifications were installed by ETL Division, Intertek Testing Services Hong Kong Ltd.

All the items listed under section 2.0 of this report are confirmed by:

EXHIBIT 3
EMISSION RESULTS

INTERTEK TESTING SERVICES

3.0 **Emission Results**

Data is included of the worst case configuration (the configuration which resulted in the highest emission levels). A sample calculation, configuration photographs and data tables of the emissions are included.

INTERTEK TESTING SERVICES

3.1 Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Factor, and subtracting the Amplifier Gain (if any) from the measured reading. The basic equation with a sample calculation is as follows:

$$FS = RA + AF + CF - AG$$

where FS = Field Strength in $\text{dB}\mu\text{V}/\text{m}$

RA = Receiver Amplitude (including preamplifier) in $\text{dB}\mu\text{V}$

CF = Cable Attenuation Factor in dB

AF = Antenna Factor in dB

AG = Amplifier Gain in dB

In the following table(s), the reading shown on the data table reflects the preamplifier gain. An example for the calculations in the following table is as follows:-

$$FS = RR + LF$$

where FS = Field Strength in $\text{dB}\mu\text{V}/\text{m}$

RR = $RA - AG$ in $\text{dB}\mu\text{V}$

LF = $CF + AF$ in dB

Assume a receiver reading of 52.0 $\text{dB}\mu\text{V}$ is obtained. The antenna factor of 7.4 dB and cable factor of 1.6 dB is added. The amplifier gain of 29 dB is subtracted, giving a field strength of 32 $\text{dB}\mu\text{V}/\text{m}$. This value in $\text{dB}\mu\text{V}/\text{m}$ was converted to its corresponding level in $\mu\text{V}/\text{m}$.

$$RA = 52.0 \text{ dB}\mu\text{V}/\text{m}$$

$$AF = 7.4 \text{ dB}$$

$$CF = 1.6 \text{ dB}$$

$$AG = 29.0 \text{ dB}$$

$$FS = RR + LF$$

$$FS = 23 + 9 = 32 \text{ dB}\mu\text{V}/\text{m}$$

$$RR = 23.0 \text{ dB}\mu\text{V}$$

$$LF = 9.0 \text{ dB}$$

$$\text{Level in } \mu\text{V}/\text{m} = \text{Common Antilogarithm } [(32 \text{ dB}\mu\text{V}/\text{m})/20] = 39.8 \mu\text{V}/\text{m}$$

INTERTEK TESTING SERVICES

EXHIBIT 4
FREQUENCY DEVIATION

4.0 **Frequency Deviation**

Two stability tests were performed -- Frequency stability versus input voltage and frequency stability versus temperature. For both measurements, a 1 GHz frequency counter with temperature controlled time base is used.

The counter is coupled to the transmitter by coiling a pickup wire over the transmitter antenna or directly attaching it to the antenna, assuming a 50Ω antenna is used.

The frequency stability is measured at room temperature by varying the supply voltage (AC or DC, as required) from 85% through 115% of normal operating voltage. This test is not applicable if the unit uses battery power. For battery powered equipment, the batteries are new and fully charged.

Stability versus temperature testing is carried out with the aid of a Tabai Espec Corp, Model PR-3F(W) environmental chamber. The following procedure is followed during testing:

1. Cool the device to -20°C and allow it to stabilize for 30 minutes. Record the frequency.
2. Heat the oven to $+50^{\circ}\text{C}$ and allow it to stabilize for 30 minutes. Record the frequency of operation.
3. Compare the measurements and a room temperature measurement against the assigned frequency tolerance.

The frequency tolerance of the carrier signal shall be maintained within $\pm 0.01\%$ of the operating frequency.

4.2.1 Measurement Data - Headset (Cont'd...)

Channel Frequency

Channel	Assigned Frequency (MHz)	Measured Frequency (MHz)	Tolerance %
14	49.46000	49.45937	-0.00127
15	49.50000	49.49928	-0.00145
16	49.67000	49.66950	-0.00101
17	49.84500	49.84426	-0.00148
18	49.86000	49.85967	-0.00066
19	49.77000	49.76936	-0.00129
20	49.87500	49.87429	-0.00142
21	49.83000	49.82937	-0.00126
22	49.89000	49.88935	-0.00130
23	49.93000	49.92921	-0.00158
24	49.99000	49.98934	-0.00132
25	49.97000	49.96939	-0.00122

INTERTEK TESTING SERVICES

4.2.2 Measurement Data - Headset - Channel 1

Frequency Stability

Frequency Stability versus Source Voltage

	Voltage (Vdc)	Assigned Frequency (kHz)	Measured Frequency (kHz)	Frequency deviation (kHz)	Tolerance % ($\times 10^{-3}$)
Nominal	3.6	48,760.00	48,759.28	-0.72	-1.48
85 %	3.06	48,760.00	48,759.22	-0.78	-1.60
115 %	4.14	48,760.00	48,759.26	-0.74	-1.52

Frequency Stability versus Temperature

Temperature (°C)	Assigned Frequency (kHz)	Measured Frequency (kHz)	Frequency deviation (kHz)	Tolerance (%) ($\times 10^{-3}$)
-20	48,760.00	48,759.69	-0.31	-0.64
25	48,760.00	48,759.28	-0.72	-1.48
50	48,760.00	48,759.07	-0.93	-1.91

Legend (where appropriate)

- * No emission was recorded at this environment. Thus, no frequency deviation can be found.

INTERTEK TESTING SERVICES

4.2.2 Measurement Data - Headset - Channel 25

Frequency Stability

Frequency Stability versus Source Voltage

	Voltage (Vdc)	Assigned Frequency (kHz)	Measured Frequency (kHz)	Frequency deviation (kHz)	Tolerance % ($\times 10^{-3}$)
Nominal	3.6	49,970.00	49,969.39	-0.61	-1.22
85 %	3.06	49,970.00	49,969.23	-0.77	-1.54
115 %	4.14	49,970.00	49,969.32	-0.68	-1.36

Frequency Stability versus Temperature

Temperature (°C)	Assigned Frequency (kHz)	Measured Frequency (kHz)	Frequency deviation (kHz)	Tolerance (%) ($\times 10^{-3}$)
-20	49,970.00	49,969.09	-0.91	-1.82
25	49,970.00	49,969.39	-0.61	-1.22
50	49,970.00	49,968.98	-1.02	-2.04

Legend (where appropriate)

* No emission was recorded at this environment. Thus, no frequency deviation can be found.

Test Results : From the two sets of tables for Headset - 4.2.1 & 4.2.2, the largest deviation from nominal frequency was 1020 Hz, which was 0.0020% compared to the standard test frequency. The required minimum standard is 0.01% in §15.233(g)

EXHIBIT 5
OPERATING BANDWIDTH

5.0 Operating Bandwidth

For measurements of bandwidth, the following procedure was followed by the test engineer:

- (1) Set up the equipment such that the antenna is located close enough to give a full scale deflection of the unmodulated carrier.
- (2) Plot the unmodulated carrier. Any residual guard tones should be left in place, as these will be present at all times in actual operation.
- (3) Plot the bandwidth with all alerting tones active. These include ringing and "call" signals from the base, and any intercom functions available in the headset.
- (4) Determine the worst case bandwidth using the following procedure:
 - (a) Disable all internal modulations, if possible.
 - (b) Apply a 2500 Hz signal to the audio input.
 - (c) Vary the input signal level and observe on the spectrum analyzer the waveform. Vary unit until a maximum deflection is observed. Record the input signal level. Record and plot the bandwidth deflection (100% modulation) measured at -26 dBc.
 - (d) **FOR A DEVICE WITH MODULATION LIMITING:**
Apply a 2500 Hz signal with the input level 16 dB greater than the level which produces 50% modulation. Plot and record the bandwidth.
 - (e) **FOR A DEVICE WITHOUT MODULATION LIMITING:**
Apply a 2500 Hz signal with the input level set for 85% modulation. If not possible, maximize the modulation percentage. Plot and record bandwidth.
- (5) Complete the tables on the following pages.

INTERTEK TESTING SERVICES

5.1 Base Unit - Channel 1

Operating Bandwidth

kHz from Carrier	Amplitude Down from Carrier (dB)	Limit (kHz)
-6.22/6.28	26	±10
- 20	56.00	N/A
+ 20	56.20	N/A

Base Unit - Channel 25

kHz from Carrier	Amplitude Down from Carrier (dB)	Limit (kHz)
-6.60/6.15	26	±10
- 20	64.50	N/A
+ 20	64.20	N/A

Test Result: From the above two tables for Base Unit-channel 1 & channel 25, the modulated signal from base unit closest to band edge was 3.40 kHz above the lower band edge 46.960 MHz according to §15.233(d)

Bandwidth Plot - Base Unit

For electronic filing, the bandwidth plot is saved with filename: bsbw.pdf

INTERTEK TESTING SERVICES

5.2 Headset - Channel 1

Operating Bandwidth

kHz from Carrier	Amplitude Down from Carrier (dB)	Limit (kHz)
-6.28/5.90	26	±10
- 20	62.50	N/A
+ 20	60.00	N/A

Headset - Channel 25

kHz from Carrier	Amplitude Down from Carrier (dB)	Limit (kHz)
-6.22/6.28	26	±10
- 20	64.50	N/A
+ 20	63.50	N/A

Test Result: From the above two tables for Headset-channel 1 & channel 25, the modulated signal from base unit closest to band edge was 3.72 kHz above the lower band edge 48.750 MHz and 3.72 kHz below the upper band edge 49.980 MHz according to §15.233(d)

Bandwidth Plot - Headset

For electronic filing, the bandwidth plot is saved with filename: hsbw.pdf

EQUIPMENT PHOTOGRAPHS

INTERTEK TESTING SERVICES

6.0 **Equipment Photographs**

For electronic filing, the photographs are saved with filename: ophoto1.jpg to ophoto2.jpg & iphoto1.jpg to iphoto8.jpg

EXHIBIT 7
PRODUCT LABELLING

7.0 **Product Labelling**

For electronic filing, the FCC ID artwork and location are saved with filename: label.pdf

EXHIBIT 8
TECHNICAL SPECIFICATIONS

8.0 **Technical Specifications**

For electronic filing, the block diagram and circuit diagram are saved with filename: block.pdf and circuit.pdf

EXHIBIT 9
INSTRUCTION MANUAL

INTERTEK TESTING SERVICES

9.0 Instruction Manual

For electronic filing, a preliminary copy of the Instruction Manual is saved with filename: manual.pdf.

Please note that the required FCC Information to the User can be found on Page 22 of this manual.

This manual will be provided to the end-user with each unit sold/leased in the United States.

INTERTEK TESTING SERVICES

EXHIBIT 10
SECURITY CODE INFORMATION

INTERTEK TESTING SERVICES

10.0 Security code information

The telephone has an internal security code over 65,000 possible combinations. Each time you pick up the HEADSET, the code is randomly set to a new combination.

Communication between HEADSET and BASE UNIT may not be possible in any of the following situation:

1. After a power failure.
2. After relocation the BASE UNIT by disconnecting the AC adaptor.
3. After replacing the HEADSET battery.

To reset, place the HEADSET on the BASE UNIT for 2 seconds.

EXHIBIT 11
AUTOMATIC CHANNEL SELECTION

INTERTEK TESTING SERVICES
