#### 2. GENERAL INFORMATION

#### 2.1 Product Description

**REPORT NO.: E989R-009** 

The SAMHONG ENGINEERING CO., LTD. Model CARPER318 (referred to as the EUT in this report) is a Digital Multi Code Transmitter for use a only garage door opener. The product specification information described herein was obtained from product data sheet or user's manual.

No other model differences have been mentioned.

#### 2.2 Related Submittal(s) / Grant(s)

ORIGINAL SUBMITTAL ONLY

#### 2.3 Test System Details

The EUT was tested with the following all equipment used in the tested system are: none

#### 2.4 Test Methodology

Both Radiated emission testing and Bandwidth of operating frequency were performed according to the procedures in ANSI C63.4/1992. Radiated testing was performed at an antenna to EUT distance of 3 meters.

#### 2.5 Test Facility

The open area test site and conducted measurement facility used to collect the radiated data is located on at 426-1 Daessangryung-Ri, Chowol-Myun, Kwangju-Kun, Kyunggi-Do 464-080 Korea. Detailed description of test facility was submitted to the Commission on January 24, 1996(31040/SIT, 1200F2).

#### REPORT NO.: E989R-009

#### 3. SYSTEM TEST CONFIGURATION

#### 3.1 Justification

The system was configured for testing in a typical fashion (as a customer would normally use it). During the tests, the following components inside the EUT were installed.

| DEVICE TYPE | MANUFACTURER                 | MODEL/PART NUMBER | FCC ID |
|-------------|------------------------------|-------------------|--------|
| MAIN BOARD  | SAMHONG ENGINEERING CO., LTD | 318               | N/A    |

#### 3.2 Equipment Modifications

To achieve compliance to FCC part 15 rule, the following change(s) were made by SAMHONG ENGINEERING CO., LTD. during compliance testing: "There was no Modified items during EMI test"

#### 3.3 Configuration of Test System

#### Line Conducted Emission Test:

It is not need to test this requirement, because the EUT supplies from a DC battery.

#### Field Strength of the Carrier Test:

The field strength of the carrier frequency shall be tested at open field test site with normal supply voltage. In addition, the variation of the fundamental transmitted by the device is shown for variation in supply voltage to 80% and 115% of the normal supply voltage. For battery operated equipment, tests shall be performed using a new battery.

#### Spurious Emission Test:

Preliminary radiated emissions tests were conducted using the procedure in ANSI C63.4/1992, 8.3.1.1 to determine the worse operating conditions. Final radiated emission tests were conducted at 3 meters open area test site.

#### Occupied Bandwidth Measurement:

This measurement is performed with the antenna located close enough to give a full-scale deflection of the modulated carrier on the spectrum analyzer. The plot is taken at 50kHz/division frequency span, 10kHz-resolution bandwidth and 5dB/division logarithmic display from an 8568B spectrum analyzer. Bandwidth is determined at the point 20dB down from the modulated carrier.
