

NT 132 Tags

The NT132 Tag is a high performance active RFID tag suitable for a wide variety of applications. The tag responds to an activation signal from the AXCESS Reader by transmitting its unique identification number. The Tag is available in three forms: Vehicle, Personnel, Asset and an LED version for diagnostic testing. The tag transmits data at a rate of up to 1K bits per second utilizing low frequency operation. The low frequency minimizes interference and allows signals to travel around and through walls, pavement, clothing and people. Typical operating range for the tag is 30 feet with an operating life of approximately 5 years.
