USER MANUAL

Introduction:

The Key Chain Transmitter operates at 303.825 MHz and is frequency stabilized by a saw resonator. Each of the three buttons when pressed, causes the transmission of a digital code corresponding to that button. The encoder utilized rolling code encryption for maximum security. The transmitter will automatically shut-off within 5 seconds if any of the push buttons is pressed continuously.

Operation:

When button 1(one) is pressed, the transmitter sends a code to the receiver(provided by user) initiating an action specified by the code(provided by user). When button 1 (one) is pressed again, the transmitter sends a code to the receiver deactivating the action.

When button 2(two) is pressed, the transmitter sends a code to the receiver(provided by user) initiating an action specified by the code(provided by user). When button 2 (two) is pressed again, the transmitter sends a code to the receiver deactivating the action.

When button 3(three) is pressed, the transmitter sends a code to the receiver(provided by user) initiating an action specified by the code(provided by user). When button 3 (three) is pressed again, the transmitter sends a code to the receiver deactivating the action.

Compliance Statement:

FCC ID: xxxKTX303

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1) This device may not cause harmful interference and
- 2) This device must accept any interference received, including interference that may cause undesired operation.

Instruction to the User:

This equipment has been tested and found to comply with the limits for a class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This equipment has been certified to comply with the limits for a class B computing device, pursuant to FCC Rules. In order to maintain compliance with FCC regulations, shielded cables must be used with this equipment. Operation with non-approved equipment or unshielded cables is likely to result in interference to radio and TV reception. The user is cautioned that changes and modification made to the equipment without the approval of manufacturer could void the user's authority to operate this equipment.
