Hi Mike,

Here are the answers.

Question #1: The antenna part number listed in the SAR test report does not agree the part number listed in the WWAN antenna specification. Please explain and make necessary correction.

<answer>the correct antenna part# is 60.4Q423.001, SAR report is correct. Pls see revised antenna spec.

Question #2: When the tablet is positioned as lap held mode, Bluetooth module and WWAN module have co-located requirements. However, in the test report, there is no co-located WWAN+BT data. Please explain.

<answer>The distance between the WWAN TX antenna and the BT antenna is about 14 cm. The output power of BT module is 3 mW. Since WWAN frequency bands (850/1900 MHz) and BT frequency band (2400 MHz) are not within the same frequency. So the co-located WWAN and BT were not tested. However, in a separate submission, CCS did investigate the BT co-located with WLAN, there is no increased in term of SAR value with WLAN and BT transmit simultaneously.

Thanks,

Claire
