ENGINEERING TEST REPORT

**ON:
THE SIERRA WIRELESS
“800 MHz WIRELESS MODEM”**

**IN ACCORDANCE WITH:
MPE REQUIREMENTS OF THE FCC PART 1**

PROJECT NO.: 7SI135-1H

TESTED FOR:

**SIERRA WIRELESS
13151 VANIER PLACE, SUITE 260
RICHMOND, B.C. V6V 2J2**

TESTED BY:

**CERTELECOM LABORATORIES INC.
3325 RIVER ROAD, R.R. 5
OTTAWA, ONTARIO K1V 1H2**

OCTOBER 1997

This document contains 19 pages including this one.

Certelcom Laboratories Inc. authorizes the above named company to reproduce this report provided it is reproduced in its entirety and for use by the company's employees only.

Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility of such third parties. Certelcom Laboratories Inc. accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

This report applies only to the items tested.

EQUIPMENT: The Sierra Wireless "800 MHz Wireless Modem"

Equipment Under Test

Model No.: MP200

Serial No.: NONE

Test Rationale

This testing was patterned after testing done in FCC/OET document ASD-9601, "Measurements of Environmental Electromagnetic Fields at Amateur Radio Stations" and OET Bulletin 65 Edition 97-01, "Evaluating Compliance with FCC Guidelines for Human Exposure to Radiofrequency Electromagnetic Fields.

Emissions were measured using a standard Roberts type dipole antenna tuned to cellular channel 440. The measured field strength was then converted to Power Density by the following relation:

$$S = E^2/3770$$

where

S = power density (mW/cm^2)

E = electric field strength (V/m)

This equation is given on page 9 of OET Bulletin 65.

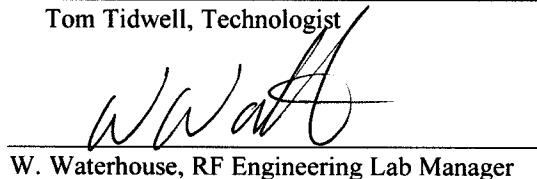

Measurements were made with the E.U.T. feeding a magnetic roof mount antenna as prescribed by the manufacturer. Measurements were made with the system installed on two different vehicles; a standard passenger vehicle and a pickup truck. Field strengths were measured at distances from 0.5 to 3 metres. The receive antenna height was varied from 1 - 3 metres to determine maximum emission levels.

Measurements were also performed with the vehicle parked adjacent to a panel van in order to investigate "hot spots" that may be caused by reflection from a nearby metallic object.

Test Performed By:

Tom Tidwell, TechnologistDate: 3 Nov. 1997

Approved By:

W. Waterhouse, RF Engineering Lab ManagerDate: 3rd November 1997

*EQUIPMENT: The Sierra Wireless "800 MHz Wireless Modem"***Test Configuration A**

Transmit antenna: LARSEN LM/CM-MM Magnetic Mount

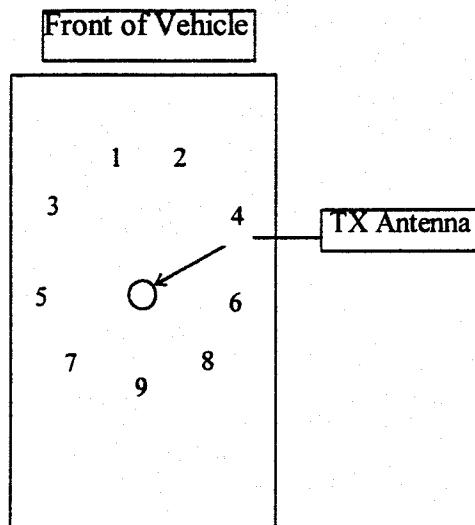

Receive antenna height: 1.5 - 2m

Vehicle: 1992 Pontiac Sunbird, 4 door

Antenna mounted in center of roof

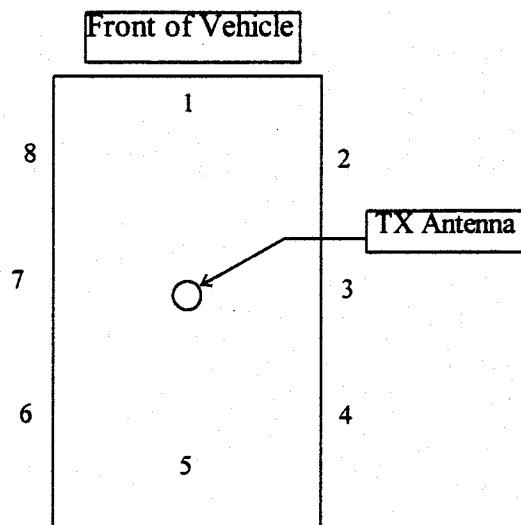

Test #1

MEASUREMENT POSITION	MEASUREMENT DISTANCE (metres)	MEASURED POWER DENSITY (mW/cm ²)	FCC LIMITS POWER DENSITY (mW/cm ²)
1	0.5	0.356	0.560
2	0.5	0.317	0.560
