### 9.3. MAXIMUM PERMISSIBLE EXPOSURE

## LIMITS

§1.1310 The criteria listed in Table 1 shall be used to evaluate the environmental impact of human exposure to radio-frequency (RF) radiation as specified in $\S 1.1307(b)$, except in the case of portable devices which shall be evaluated according to the provisions of $\S 2.1093$ of this chapter.

Table 1-Limits for Maximum Permissible Exposure (MPE)

| Frequency range (MHz) | Electric field strength (V/m) | Magnetic field strength ( $\mathrm{A} / \mathrm{m}$ ) | Power density ( $\mathrm{mW} / \mathrm{cm}^{2}$ ) | Averaging time (minutes) |
| :---: | :---: | :---: | :---: | :---: |
| (A) Limits for Occupational/Controlled Exposures |  |  |  |  |
| 0.3-3.0 | 614 | 1.63 | ${ }^{*}(100)$ | 6 |
| 3.0-30 | 1842才 | 4.897f | ${ }^{*}\left(9000{ }^{2}\right.$ ) | 6 |
| 30-300 | 61.4 | 0.163 | 1.0 | 6 |
| 300-1500 | .......................... | ....................... | f/300 | 6 |
| 1500-100,000 |  |  | 5 | 6 |
| (B) Limits for General Population/Uncontrolled Exposure |  |  |  |  |
| 0.3-1.34 | 614 | 1.63 | ${ }^{*}(100)$ | 30 |
| 1.34-30 ............................ | 8247 | 2.197 | ${ }^{*}\left(180 \mathrm{fr}^{2}\right)$ | 30 |

TABLE 1-Limits for MAXImum Permissible Exposure (MPE)—Continued

| Frequency range $(\mathrm{MHz})$ | Electric field strength (V/m) | Magnetic field strength (A/m) | Power density ( $\mathrm{mW} / \mathrm{cm}^{2}$ ) | Averaging time (minutes) |
| :---: | :---: | :---: | :---: | :---: |
| 30-300 ................................................... | 27.5 | 0.073 | 0.2 | 30 |
| 300-1500 .............................................. |  |  | f/1500 | 30 |
| 1500-100,000 ......................................... | .......................... | .......................... | 1.0 | 30 |

$\mathrm{f}=$ frequency in MHz
= Plane-wave equivalent power density
NOTE 1 TO TABLE 1: Occupational/controlled limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for oocupational/controlled exposure also apply in situations when an individual is transient through a location where occupational/controlled limits apply provided he or she is made aware of the potential for exposure.

NOTE 2 TO TABLE 1: General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or can not exercise control over their exposure.

## CALCULATIONS

## Given

$E=\sqrt{ }(30 * P * G) / d$
and
$S=E^{\wedge} 2 / 3770$
where
$\mathrm{E}=$ Field Strength in Volts/meter
$P=$ Power in Watts
G = Numeric antenna gain
d = Distance in meters
$S=$ Power Density in milliwatts/square centimeter
Combining equations and rearranging the terms to express the distance as a function of the remaining variables yields:
$\mathrm{d}=\sqrt{ }((30 * P * G) /(3770 * S))$
Changing to units of Power to mW and Distance to cm , using:
$P(m W)=P(W) / 1000$ and
$d(c m)=100$ * $d(m)$
yields
$d=100 * \sqrt{ }((30 *(P / 1000) * G) /(3770 * S))$
$d=0.282 * \sqrt{ }(P * G / S)$
where
d = distance in cm
P = Power in mW
G = Numeric antenna gain
$S=$ Power Density in $\mathrm{mW} / \mathrm{cm}^{\wedge} 2$
Substituting the logarithmic form of power and gain using:
$\mathrm{P}(\mathrm{mW})=10^{\wedge}(\mathrm{P}(\mathrm{dBm}) / 10)$ and
$G($ numeric $)=10^{\wedge}(G(d B i) / 10)$
yields
$\mathrm{d}=0.282 * 10^{\wedge}((\mathrm{P}+\mathrm{G}) / 20) / \sqrt{ } \mathrm{S} \quad$ Equation (1)
where
$\mathrm{d}=$ MPE distance in cm
$P=$ Power in dBm
$\mathrm{G}=$ Antenna Gain in dBi
$\mathrm{S}=$ Power Density Limit in $\mathrm{mW} / \mathrm{cm}^{\wedge} 2$

Equation (1) and the measured peak power is used to calculate the MPE distance.

## LIMITS

From §1.1310 Table $1(B), S=0.549 \mathrm{~mW} / \mathrm{cm}^{\wedge} 2$ for cellular band and $1.0 \mathrm{~mW} / \mathrm{cm}^{\wedge} 2$ for PCS band.

## RESULTS

| Mode | MPE Distance (cm) | Ave Output Power (dBm) | Antenna Gain (dBi) | Power Density (mW/cm^2) | $\begin{gathered} \text { Limits } \\ \left(\mathrm{mW} / \mathrm{cm}^{\wedge}\right) \\ \hline \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 800MHz Celllar | 20.0 | 23.80 | 5.20 | 0.158 | 0.549 |
| 1900 MHz PCS | 20.0 | 23.60 | 3.75 | 0.108 | 1 |

NOTE: For mobile or fixed location transmitters, the minimum separation distance is 20 cm , even if calculations indicate that the MPE distance would be less.
