

Amendment to Highest Output Power

Federal Communications Commission
7435 Oakland Mills Road
Columbia, MD 21046

Mar 05, 2010

Dear Sir/Madam:

We re-issued FCC test reports with the amendment of the highest output power in the current MC8795V FCC report (I09GW6944-FCC-EMC-2 and I09GW6944-FCC-MPE-3).

The reason for the amendment of the highest output power as below:

- 1, the peak power of PCS1900 band (GPRS 1 time slot) in the current test report is the average power; we should revise it to the peak power.
- 2, the peak power of PCS1900 band (EGPRS 1 time slot) in the current test report is the average power; we should revise it to the peak power.

After we issued the current test report at that time and later we found the value's issue, So we re-issued the test reports to the customer.

We are sorry for any inconvenient may caused.

In the event there is any question, please do not hesitate to contact us.

Thank you.

Sincerely,

Signature:
