

MODEL: 217S53

Circuit description

This is a RF 433MHz thermometer remote sensor.

The unit is capable to transmit 433MHz signal to receiver through 433MHz transmitter circuit.

The unit can transmit the temperature unit in °C or °F.

Press "Tx" key can transmit 433MHz signal at the moment.

The unit use 2 pcs AAA of 1.5V battery in-series connection. It gives 3V supply and it is a low power consumption design.
