Ms. Hawkins,

I sincerely apologize for this not getting answered.

Product Description: This product is the vehicle portion of an automotive security system. When the person carried transmitter is momentarily activated it sends out a identity code which will be received by the transceiver in the vehicle, which after a pause will transmit a confirmation code back to the handheld transceiver. Also if the vehicle's security is broken the EUT transmits a signal to the handheld unit.

Again I apologize about the delay.

Sincerely,

Sid Sanders
