TO: George Tanahill
FCC

Subject: FCCID: NAHCTR433

REFERENCE: EA94503

Dear George:

This unit does not transmit data, it sends a specific address code. Each code has a seperate input. The alarm chip generates a pulse train for each address which in turn varies the frequency of the crystal controlled oscillator. As best as I can tell the only difference in this unit and most pulse modulated transmitters is that this one is FM.

Attached is a corrected Declaration of Conformity with a phone number.

Attached is wiring diagram that shows the ralationship between the RF portion and the Logic & Power Module.

BEST REGARDS,

Sid Sanders
