REFERENCE: EA94502

When the button is pushed this unit send a pulse train that is 180mSec long, waits 250mSec then send it again. Then nothing happens until the button is released, at that time it sends the 180mSec pulse train again. After the button is released all transmissions cease until a button is pushed again.

The only predetermined interval that I am aware of is between the 1st pulse train & the 2nd one 250mSec later.

The pulse train FM modulates the carrier. The pulse train varies in content depending on which button is pushed.

BEST REGARDS,

Sid Sanders
