Re: Modification Details- EU870D device / EU850D device.

Dear Sirs:

The original hardware, EU870D is a dual band GSM/WCDMA device operating in the 850 MHz Cellular band as well as the 1900 MHz PCS band. The EU850D is a modified version of the EU870D, the only difference being the addition of a Subscriber Interface Module (SIM) at the top of the device which penetrates the RF shield. The changes are depicted in the illustration below.

SIM connector

EU850D

Sincerely,

Jim Turner
