

Gantner Electronic GmbH TEST REPORT

SCOPE OF WORK RADIO TESTING – RFID TERMINAL [GT7.2700]

REPORT NUMBER 2241159KAU-012

ISSUE DATE

06-October-2021

PAGES 40

DOCUMENT CONTROL NUMBER R_FCC 15-225_18-01 (25-January-2018) © 2017 INTERTEK

| TYPE: | GT7.2700 | |
|--|-------------------------------|--|
| DESCRIPTION: | RFID Terminal | |
| SERIAL NO (EUT 1): | 2015000133 | |
| SERIAL NO (EUT 2)*: | 2015000246 | |
| *The antenna of the RFID module was replac | ed by a terminating resistor. | |
| All measurement results refer to the equipment | ent which was tested | |
| MANUFACTURER: | Gantner Electronic Gmb | рН |
| CUSTOMER NAME: | Gantner Electronic Gmb | рН |
| ADDRESS (CUSTOMER): | Bundesstr. 12 | |
| | AT-6714 Nüziders | |
| | AUSTRIA | |
| | | |
| | | |
| REPORT NO: | 2241159KAU-012 | |
| | | |
| | | |
| TEST RESULT: | The equipment comp | lies to 47 CFR Part 15, Subpart C, |
| | Intentional radiators, | section 15.207 and 15.225 / RSS-210, |
| | Issue 10 and RSS-GEN | , Issue 5 for 13.56 MHz RFID module |
| | (Referring to the oper | ating modes specified in this report). |
| | The 125 kHz RFID mo | dule was documented in another test |
| | report. | |

SECTION 2

MEASUREMENT AND TEST SPECIFICATION

47 CFR Part 15, Subpart C, Intentional radiators, section 15.207 and section 15.225 / RSS-210, Issue 10 and RSS-GEN, Issue 5

Test methods in:

ANSI C63.10-2013: American National Standard for Testing Unlicensed Wireless Devices

No additions, deviations or exclusions have been made from standards and accreditation.

The test results detailed in this report apply only to the GT7.2700 with the test setup described. Any modification such as a change, addition to or inclusion of another device into this product will require an additional evaluation.

The support equipment listed as part of the emission tests is required to properly exercise and test the device under test.

| ANECHOIC CHAMBER 1 | Semi-anechoic 3 m | 24854 |

SECTION 4 SUMMARY OF TESTING

4.1 General annotation

The tests were performed in the order of the right column in the "Test Results – Overview" table.

At least at one emission test the margin to the limit is less than 6 dB. A minimum margin of 3 - 6 dB is recommended for a serial production.

As a wish of the manufacturer/customer the 13.56 MHz RFID module is only measured in one operating mode (send mode). Therefore the RFID module was not measured in standby mode.

In practice, the 13.56 MHz RFID module, the 125 kHz RFID module and the Bluetooth module never transmit at the same time.

4.2 Identical types

The following variant models were not tested as part of this evaluation, but have been identified by the manufacturer as being electrically identical models to the model tested. Intertek does not make any claims of compliance for samples or variants which were not tested.

The manufacturer/customer declared the following type(s) identical to the tested type: GT7.2701

The differences are according to the manufacturer/customer: The GT7.2701 is an GT7.2700 with a different housing. The housing materials are the same but in a slightly modified form.

4.3 Measurement uncertainty

For each test method, an uncertainty evaluation was carried out. The results of the evaluation can be provided upon request from Intertek Deutschland GmbH (see section 7.7).

| Antenna: | 🔀 Internal antenna | External antenna |
| Antenna connector: | 🔀 None, internal anter | nna 🗌 Yes, type |
| Antenna type: | Internal PCB antenna | |
| Antenna gain: | - | |
| Power rating: | - | |
| Channel spacing: | - | |
| Receiving only mode supported: | Yes | 🔀 No |

6.1.2 Photo of the rating plate and of the EUT

6.2 **Power interface**

| MODE | VOLTAGE (V) | FREQUENCY (Hz) | COMMENT |
|-------|------------------------|----------------|--------------|
| Rated | 36-57 | DC | PoE |
| 1 | 120 V (AC) / 48 V (DC) | (60Hz)AC/DC | PoE Injector |

6.3 Peripheral devices used for testing

| DEVICE | MANUFACTURER | TYPE | SN | FCC ID |
|------------------|--------------|------------------|---------------|---------------|
| PoE Injector | tP-link | TL-POE150S | 22040D6006214 | - |
| Power supply | tP-link | T480050-2C1 | - | - |
| for PoE Injector | | | | |
| Notebook | HP | HP ProBook 6560b | 5CB20246BZ | QDS-BRCM 1043 |

6.4 Configuration mode

| MODE | DESCRIPTION |
|------|---|
| 1 | The EUT was placed on the table and was connected to PoE Injector (see section 6.9) |
| 2 | The EUT was placed on the table and was connected to PoE Injector (see section 6.10). |
| 3 | The EUT was in the climatic chamber and was connected to PoE Injector (see section 6.11). |
| | |

6.5 Operation mode

| MODE | DESCRIPTION |
|------|--|
| 1 | Normal operation and the 13.56 MHz RFID module of the EUT was in continuous wave mode. The 125 kHz RFID module and the Bluetooth module were off. The RFID tag was placed in front of the EUT. |
| 2 | Normal operation. The antenna of the 125 kHz RFID module and the antenna of the 13.56 MHz RFID module were replaced by a terminating resistor. The Bluetooth module was off. |
| 3 | Normal operation. The 13.56 MHz RFID module was in transmission mode and the RFID tag was placed in front of the EUT. The Bluetooth module and 125 kHz RFID module were off. |

6.6 Clock frequencies of the EUT

| SOURCE | FREQUENCY |
|-----------------------------|---------------------------------------|
| Processor module ICNova A20 | PII Main Processor: up to 1 GHz; |
| | 3 Crystals: 25 MHz, 24 MHz and 32 kHz |
| RFID Reader 13.56 MHz | SPI @ 2 MHz |
| RFID Reader 125 kHz | UART 112 kbit |
| Co-Processor STM32L0 | Crystal: 32 kHz |
| TFT Display | 24Bit RGB, 9 MHz |
| Capacitive Touch Panel | I2C @ 400 kHz |
| Bluetooth | 2402 GHz – 2480 GHz |

6.7 Supply and interconnecting cables used for testing

| LINE | LENGTH (cm) | SHIELDING | FERRITE | TERMINATION |
|------------------------|----------------|-----------|---------|-------------|
| Ethernet 1 | 180 | Y | Ν | - |
| Ethernet 2 | 100 | Y | Ν | - |
| Ethernet 3 | 100 | Y | Ν | - |
| Cable for power supply | 160 | N | N | - |

6.8 Antenna configuration

| | DESCRIPTION |
|-------------|--|

7.2 Field strength 13.110 MHz – 14.010 MHz (Emission Mask)

| NORMATIVE REFERENCES | RESULT | | |
|------------------------|-------------------------------|----------------|-----------|
| Limits according to: | P | | |
| Methods of measurement | ANSI C63.10, section 6.3, 6.4 | 4 | P |
| according to: | RSS-Gen 6.13, 8.9 | | |
| | Power interface | 1 | |
| Equipment mode | EUT configuration mode | 1 | |
| | Operation mode | 1 | |
| | Frequency range | 13.110 MHz – 1 | 4.010 MHz |
| Test requirements | Measurement time | 1 s | |
| | Antenna height | 1 m | |

Limits

The limits below 30 MHz are given for different measurement distances. The limits below 30 MHz are converted to 3 m by using the extrapolation factor 40 dB/decade (according to §15.31).

| Frequency (MHz) | Field strength (µV/m) | Field strength (dBμV/m) | Measurement distance (m) | Field strength (dBµV/m) | Measurement distance (m) |
|--------------------|--------------------------|----------------------------|-----------------------------|----------------------------|-----------------------------|
| 13.110 - 13.410 | 106 | 40.5 | 30 | 80.5 | 3 |
| 13.410 - 13.553 | 334 | 50.5 | 30 | 90.5 | 3 |
| 13.553 - 13.567 | 15848 | 84.0 | 30 | 124.0 | 3 |
| 13.567 - 13.710 | 334 | 50.5 | 30 | 90.5 | 3 |
| 13.710 - 14.010 | 106 | 40.5 | 30 | 80.5 | 3 |

Test setup details

Compliance with the spectrum mask is tested using a spectrum analyzer with resolution bandwidth set to 10 kHz or 9 kHz CISPR. The video bandwidth shall be at least three times greater than the resolution bandwidth.

The test was carried out automatically by the test receiver.

The EUT is a table-top EUT and was standing on a table made of Styrodur with a Pertinax plate on top and the dimensions 1.6 m x 1.0 m x 0.8 m (Length x Width x Height).

The emission limits shown in the above table are based on measurements employing a CISPR quasipeak detector.

| Frequency (MHz) | Corr. (dB/m) | Comment |
|--------------------|-----------------|---------|
| 13.557750 | 20 | - |

Comment

The 13.56 MHz RFID transmitter was operated in CW mode. Therefore, the bandwidth of the transmitting signal is smaller than the measuring bandwidth of the measuring receiver. Thus, a measurement with a larger measurement bandwidth was not necessary.

Anechoic chamber

Test procedure

The test site is an anechoic chamber suitable for radiated emission measurements in the frequency range of 9 kHz – 30 MHz It includes automatic turntable of radius 2 m. It enables manual and fully automatic measurements.

To find the highest level of radiation

- the height of the antenna is 1m with antenna in horizontal and vertical polarization;
- the turntable is rotated in range from 0° to 360°.

The system was configured for testing in a typical worst case fashion (as a customer may use it). All interface cables were moved to determine the position which resulted in the highest emission levels.

Correction factors

The field strength is calculated by adding the antenna factor and cable attenuation. The calculations are performed automatically by the measurement software EMC 32. As example consider the following input values and result:

| FREQUENCY (MHZ) | RECEIVER READING | ANTENNA FACTOR | CABLE ATTENUATION | CORRECTION ANTENNA + | RADIATED FIELD STRENGTH |
|--------------------|---------------------|-------------------|----------------------|-------------------------|----------------------------|
| | U | AF | А | CABLE | E |
| | (dBµV) | (dB/m) | (dB) | (dB) | (dBµV/m) |
| 30.0 | 20 | 20.6 | 0.8 | 21.4 | 41.4 |

E = U + AF + A

Total Quality. Assured.

| Additionally, the level of any unwanted amissions shall not avecad the level of the fundamental amission | | | | | | |

Additionally, the level of any unwanted emissions shall not exceed the level of the fundamental emission.

Test setup details

Compliance with the spectrum mask is tested using a spectrum analyzer with resolution bandwidth set to 10 kHz or 9 kHz CISPR. The video bandwidth shall be at least three times greater than the resolution bandwidth.

The test was carried out automatically by the test receiver.

The EUT is a table-top EUT and was standing on a table made of Styrodur with a Pertinax plate on top and the dimensions 1.6 m x 1.0 m x 0.8 m (Length x Width x Height).

The emission limits shown in the above table are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9-90 kHz, 110-490 kHz and above 1000 MHz. Radiated emission limits in these three bands are based on measurements employing an average detector.

Anechoic chamber

Test procedure

The test site is an anechoic chamber suitable for radiated emission measurements in the frequency range of 30 MHz - 18 GHz (40 GHz). It includes automatic antenna mast of height 4 m and turntable of radius 2 m. It enables both manual and fully automatic measurements. To find the highest level of radiation

- the height of the antenna is scanned in range 1m to 4 m with antenna in horizontal and vertical polarization;
- the turntable is rotated in range from 0° to 360°.

The system was configured for testing in a typical worst case fashion (as a customer may use it). All interface cables were moved to determine the position which resulted in the highest emission levels.

Correction factors

The field strength is calculated by adding the antenna factor and cable attenuation. The calculations are performed automatically by the measurement software EMC 32. As example consider the following input values and result:

| FREQUENCY (MHZ) | RECEIVER | ANTENNA FACTOR | CABLE ATTENUATION | CORRECTION ANTENNA + | RADIATED FIELD |
|--------------------|----------|-------------------|----------------------|-------------------------|----------------|
| (11112) | | AF | A | CABLE | E (dDu)//m) |
| | (ασμν) | (ub/m) | (ав) | (ав) | (ασμν/m) |
| 30.0 | 20 | 20.6 | 0.8 | 21.4 | 41.4 |

 $\mathbf{E} = \mathbf{U} + \mathbf{AF} + \mathbf{A}$

| +10 | | 13.55994 |
| 0 | | 13.56009 |
| -10 | | 13.56003 |
| -20 | | 13.56013 |

Comment

The EUT was supplied with the power supply unit.

The AC supply voltage was varied from 102 to 138 V.

The voltage variations had no influence on the transmission level.

| Voltage | Temperature | Upper limit: 13.561356 MHz |
|---------|-------------|---|
| V | | Lower limit: 13.558644 MHz |
| | | Measured frequency under AC supply voltage variation: |
| 102 | 20°C | 13.55988 |
| 138 | | 13.55988 |

7.6 20 dB bandwidth

| NORMATIVE REFERENCES | | | RESULT |

| | | | |

Limits

Intentional radiators operating under the alternative provisions to the general emission limits, as contained in §§15.217 through 15.257 and in subpart E of this part, must be designed to ensure that the 20 dB bandwidth of the emission, or whatever bandwidth may otherwise be specified in the specific rule section under which the equipment operates, is contained within the frequency band designated in the rule section under which the equipment is operated.
