

## Safety Statement

### Additional Leaflet

---

#### Federal Communications Commission Notice

This equipment radiates radio frequency energy during operation. In order to minimize the amount of energy radiated into the human body please maximize the distance between the antenna and the human body. The distance between the user and the antenna should at least be 20 cm.

When using an external antenna, please ensure only using antennas with nominal impedance of 50Ohm, a gain of 0 dBi  $\pm$  1 dBi, and a minimal cable length of 20 cm. The distance between the external antenna and the user should be at least 20 cm.

This device has been tested for compliance with FCC RF exposure limits in a typical laptop computer such as the one reported in the grant application. This device is only authorized to be used in such a typical laptop computer.
