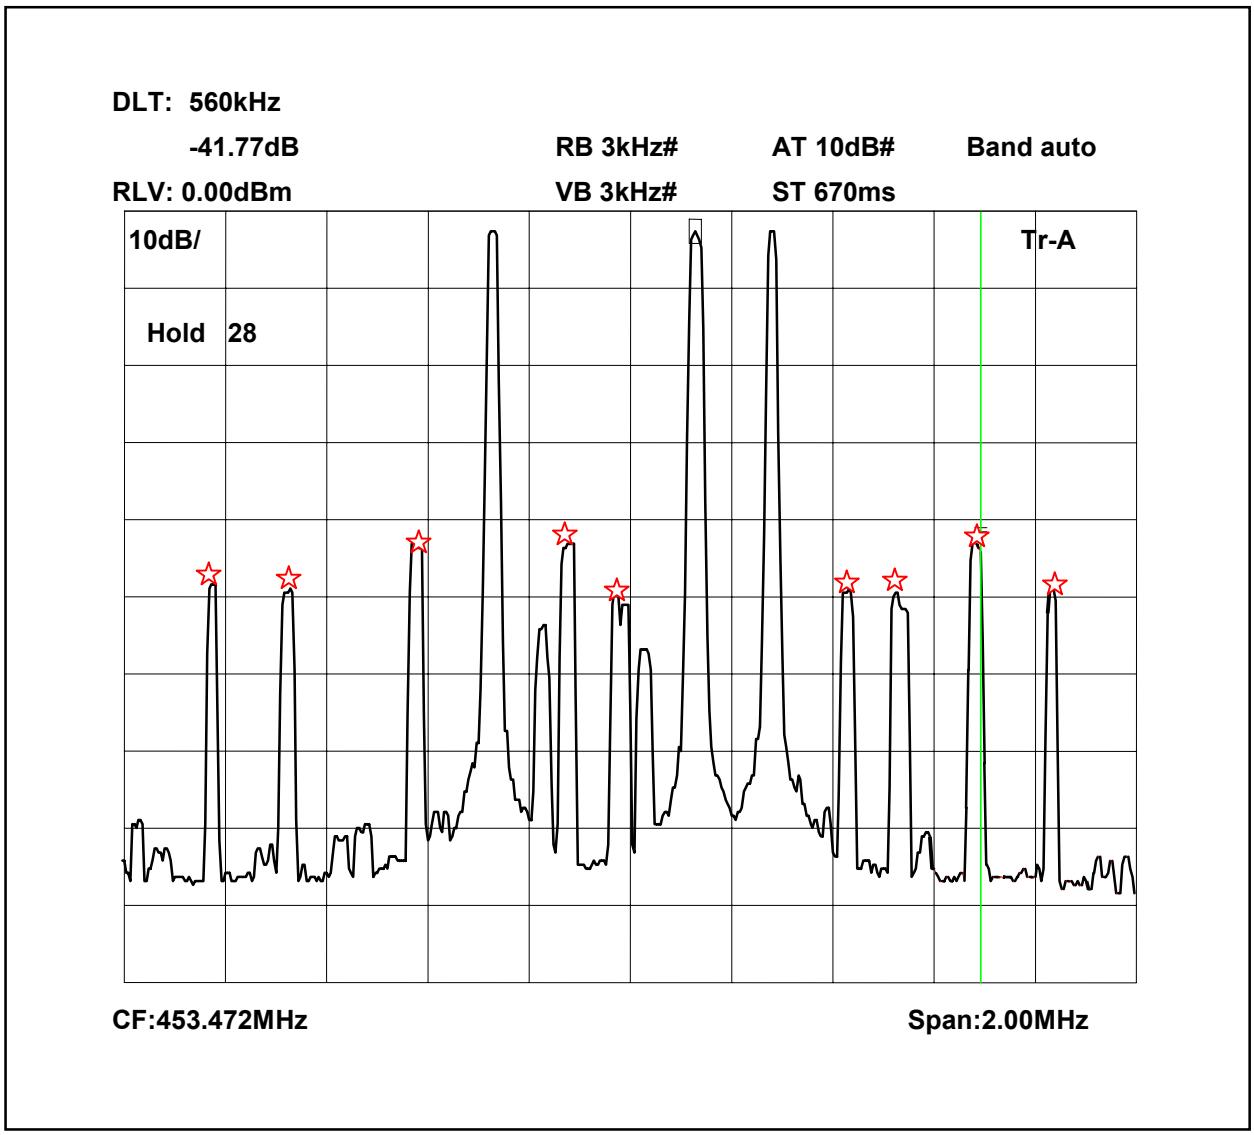
The Intermodualation and spurious products were measured with the amplifier operating at maximum gain. A three tone test was conducted using the equipment as above. The input power level was adjusted so the level at point D was the maximum input of –73.4dBm The cable and attenuator loss between the EUT and the spectrum analyser was 26.7 dB.

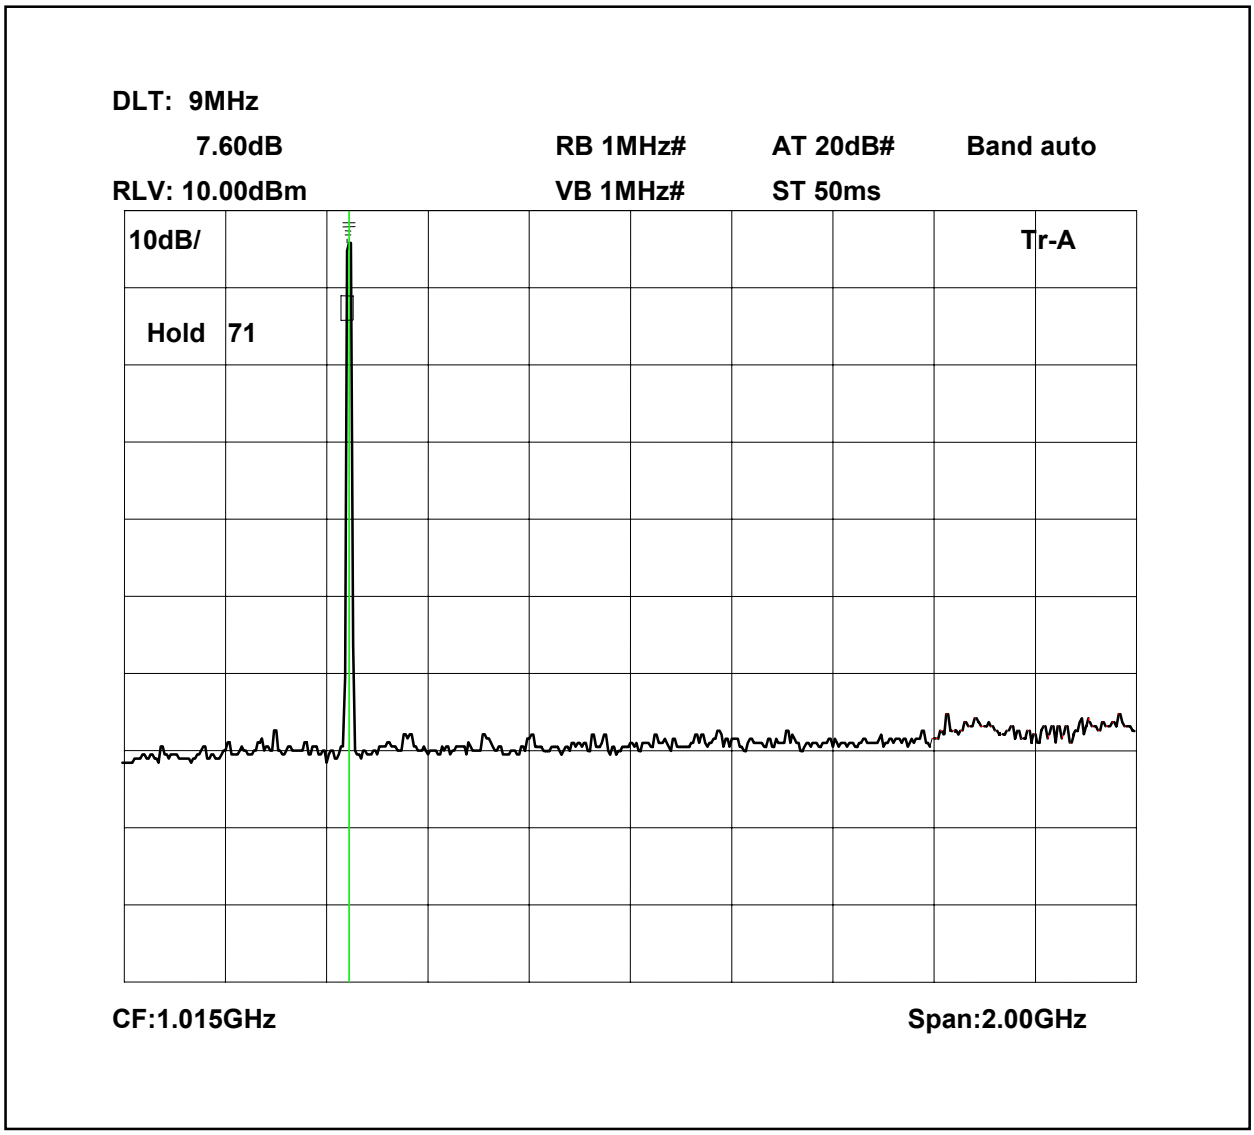
Sweep data is shown on the next page:

Intermodulaion Inband



The above plot shows that all products (designated by ☆) are at least 40dB below the fundamentals.

Intermodulation Wideband



The above plot shows that there are no products outside the bands.
