REF: NEO80-330558, Part 90.219 Use of signal boosters.

This product meets the requirements of 90.219. It is intended for use as an air interface between a confined space tunnel environment and the outside environment. It is channelised in the downlink path for transmission to air from a dedicated base station using directional yagi antennas to avoid any interference issues. In the uplink path it is receiving from air using directional yagi antennas and amplifying the signal to a dedicated base station.

If you have any further questions or comments do not hesitate to contact me.

Yours faithfully

For and on behalf

Axell Wireless Limited
