

2.4GHz Wireless Camera Transmitter, using FM method for Audio/Video signal modulation. It has better signal to noise ratio than Amplitude Modulation. There are four channels relative to the following frequencies : CH 1 : 2414 MHz, CH 2 : 2432 MHz, CH 3 : 2450 MHz, CH 4 : 2468 MHz, this device is used for surveying environment situation or similar applications of Audio and Video signals transmission.
