

Subject: FCC ID: NKRHNT-MSW1

Dear Bill,

Yes, the Memory Stick interface is usually available in the hand-held devices, and the EUT is always a option device for the PDA user, but during the RF testing, the testing program is not available under the Palm OS or the other PDA OS . The testing program is only available on the XP. So, we need the memory stick to PCMCIA converter to link the EUT and the notebook PC for testing.

If there is any info needed, feel free to contact me through e-mail

Thanks

Daphne Liu
