

Dear Mr. Graff:

This is in response to your comments dated January 13, 2001.

1- The photos were taken in accordance to procedures.

However, we are setting up the system again and photos shall be submitted no later than Saturday, January 20, 2001

4- Attached is the RF Exposure statement for Nokia Card.

5- The band edge plots are shown on page 16 of the FCC Report. These plots are antenna conducted output. The restricted band at 2483.5 shows no emission level measurable. Therefore no radiated data is provided.

The lower Band edge plots shows about 40 dB down from the carrier with 100 kHz resolution bandwidth on the spectrum analyzer.

Best regards,

Brian
