Re: Marketing and Professional Installation of the System

FCC ID: NM5-LUC2400E

Since the equipment used in the above referenced FCC ID has standard RF connectors, the system must be professionally installed. The installer shall be responsible for ensuring that the proper antenna is employed so that the limits specified in Part 15.247 (b) are not exceeded. It is only intended for industry/commercial use.

Marketing The intended use is generally for industrial/commercial use and will not be sold to the general public. It will also not be sold through retail establishments or through mail order. It will be sold to OEM customers, qualified dealers and directly to commercial customers.

Professional Installation This system must be professionally installed by RF professionals since it uses standard RF connectors. The installation manual mandates professional installation. YDI offers special training to any professional installer desiring additional information on the proper installation of its equipment, including permissible power limitations and method for testing such emissions. Since the product is designed for outdoor installation, all installations will require professional installation and in many jurisdictions, local building codes will also mandate professional installation.

A handwritten signature in black ink, appearing to read 'M. Young', is written over a faint, circular stamp or watermark.
