Declaration – MIF for HAC RF Interference Evaluation

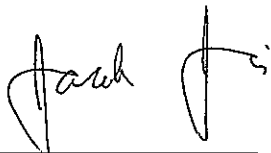

To Whom It May Concern,

This device, with FCC ID: **NM80P3P700**, Hearing Aid Compatibility Requirement is going to be certified under **ANSI C63.19-2011 version per Part 20.19**.

The M rating was determined by measuring the maximum steady state average E-field values in dB (V/m) as documented in this HAC report and adding the MIF value in dB (V/m) using pre-determined values provided by Speag under **UID 10276 CAA (28.02.2013)**. The Speag-reference documentation for supporting the pre-determined MIF value is Schmid & Partner Engineering AG, **UID SUMMARY (Communication Systems for Calibration, Issued Date 2013/05/31)**.

We confirm that the Speag simulation provided represents all the air interface modes applicable for a HAC rating for this handset.

Sincerely Yours,

2013. 9. 12
