

# FCC TEST REPORT (Part 24)

**REPORT NO.:** RF110418C16-3

MODEL NO.: PG86310

**FCC ID:** NM8PG86310

**RECEIVED:** Apr. 18, 2011

**TESTED:** Apr. 26 ~ May 03, 2011

**ISSUED:** May 12, 2011

**APPLICANT:** HTC Corporation

ADDRESS: No. 23, Xinghua Rd., Taoyuan City, Taoyuan, 330

Taiwan

**ISSUED BY:** Bureau Veritas Consumer Products Services

(H.K.) Ltd., Taoyuan Branch

LAB ADDRESS: No. 47, 14th Ling, Chia Pau Tsuen, Lin Kou

Hsiang, Taipei Hsien 244, Taiwan, R.O.C.

**TEST LOCATION:** No. 19, Hwa Ya 2nd Rd, Wen Hwa Tsuen, Kwei

Shan Hsiang, Taoyuan Hsien 333, Taiwan, R.O.C.

This test report consists of 73 pages in total. It may be duplicated completely for legal use with the approval of the applicant. It should not be reproduced except in full, without the written approval of our laboratory. The client should not use it to claim product endorsement by TAF or any government agencies. The test results in the report only apply to the tested sample.

# 1 CERTIFICATION

**PRODUCT:** Smart Phone

**MODEL NO.:** PG86310

BRAND: hTC

**APPLICANT: HTC Corporation** 

**TEST SAMPLE:** Production Unit

**TESTED:** Apr. 26 ~ May 03, 2011

TEST STANDARDS: FCC Part 24, Subpart E

ANSI C63.4-2003

The above equipment (model: PG86310) has been tested by **Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch,** and found compliance with the requirement of the above standards. The test record, data evaluation & Equipment Under Test (EUT) configurations represented herein are true and accurate accounts of the measurements of the sample's EMC characteristics under the conditions specified in this report.

PREPARED BY: , DATE: May 12, 2011

Gary Chang / Assistant Manager

# 2 SUMMARY OF TEST RESULTS

The EUT has been tested according to the following specifications:

|                     | APPLIED STANDARD: FCC Part 24 & Part 2   |        |  |  |  |  |  |  |
|---------------------|--|--------|--|--|--|--|--|--|
| STANDARD<br>SECTION | TEST TYPE AND LIMIT  | RESULT | REMARK   |  |  |  |  |  |
| 2.1046<br>24.232    | Maximum Peak Output Power Limit: max. 2 watts e.i.r.p peak power   | PASS   | Meet the requirement of limit.<br>Max. e.i.r.p is 29.5dBm at<br>1880.0MHz.         |  |  |  |  |  |
| 2.1055<br>24.235    | Frequency Stability<br>AFC Freq. Error vs. Voltage<br>AFC Freq. Error vs. Temperature<br>Limit: max. +/-2.5ppm | PASS   | Meet the requirement of limit.   |  |  |  |  |  |
| 2.1049<br>24.238(b) | Occupied Bandwidth   | PASS   | Meet the requirement of limit.   |  |  |  |  |  |
| 24.238(b)           | Band Edge Measurements   | PASS   | Meet the requirement of limit.   |  |  |  |  |  |
| 2.1051<br>24.238    | Conducted Spurious Emissions   | PASS   | Meet the requirement of limit.   |  |  |  |  |  |
| 2.1053<br>24.238    | Radiated Spurious Emissions  | PASS   | Meet the requirement of limit.<br>Minimum passing margin is<br>–20.1dB at 5640MHz. |  |  |  |  |  |

### 2.1 MEASUREMENT UNCERTAINTY

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2:

| MEASUREMENT         | FREQUENCY       | UNCERTAINTY |  |
|---------------------|-----------------|-------------|--|
| Conducted emissions | 9kHz~30MHz      | 2.44 dB     |  |
|                     | 30MHz ~ 200MHz  | 2.93 dB     |  |
| Radiated emissions  | 200MHz ~1000MHz | 2.95 dB     |  |
| Radiated emissions  | 1GHz ~ 18GHz    | 2.26 dB     |  |
|                     | 18GHz ~ 40GHz   | 1.94 dB     |  |

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

# **3 GENERAL INFORMATION**

# 3.1 GENERAL DESCRIPTION OF EUT

| EUT                   | Smart Phone  |                       |  |
|-----------------------|--|-----------------------|--|

|    | HSUPA  | V            | √            |                                     |

4. IMEI Code: 35719704\*\*\*\*\*\*

5. The above EUT information is declared by manufacturer and for more detailed features description, please refer to the manufacturer's specifications or User's Manual.

# 3.2 DESCRIPTION OF TEST MODES

# FOR GSM, GPRS & E-GPRS:

299 channels are provided to this EUT. Therefore, the low, middle and high channels are chosen for testing.

|        | CHANNEL | FREQUENCY  | TX MODE           |
|--------|---------|------------|-------------------|
| LOW    | 512     | 1850.2 MHz | GSM, GPRS, E-GPRS |
| MIDDLE | 661     | 1880.0 MHz | GSM, GPRS, E-GPRS |
| HIGH   | 810     | 1909.8 MHz | GSM, GPRS, E-GPRS |

#### NOTE:

- 1. Below 1 GHz, the channel 512, 661, and 810 were pre-tested in chamber. The channel 810 was chosen for final test.
- 2. Above 1 GHz, the channel 512, 661, and 810 were tested individually.
- 3. The worst case for final test is chosen when the power control level set 0.
- 4. The channel space is 0.2MHz.
- 5. The EUT is a GPRS class 10 device (Multislot class: 10, Mobile Terminal B), which provide 2 up-link. After pre-tested 2 functions, found up-link with 1 time slot is worse, therefore, test results of output power, frequency stability, occupied bandwidth and band edge tests came out from this.
- 6. The EUT is an E-GPRS class 10 device (Multislot class: 10, Mobile Terminal B), which provide 2 up-link. After pre-tested 2 functions, found up-link with 1 time slot is worse, therefore, test results of output power, frequency stability, occupied bandwidth and band edge tests came out from this.
- 7. The EUT has GSM, GPRS & E-GPRS functions. After pre-testing, GSM function is the worst case for all the emission tests.

# FOR WCDMA:

277 channels are provided to this EUT. Therefore, the low, middle and high channels are chosen for testing.

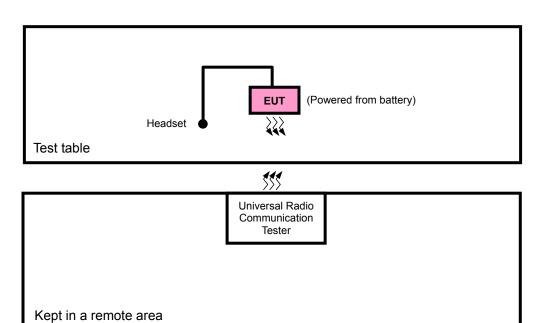

|        | CHANNEL | FREQUENCY  | TX MODE             |
|--------|---------|------------|---------------------|
| LOW    | 9262    | 1852.4 MHz | WCDMA, HSDPA, HSUPA |
| MIDDLE | 9400    | 1880.0 MHz | WCDMA, HSDPA, HSUPA |
| HIGH   | 9538    | 1907.6 MHz | WCDMA, HSDPA, HSUPA |

#### NOTE:

- 1. Below 1 GHz, the channel 9262, 9400 and 9538 were pre-tested in chamber. The channel 9538 was chosen for final test.
- 2. Above 1 GHz, the channel 9262, 9400 and 9538 were tested individually.
- 3. The channel space is 0.2MHz.
- After pretest of output power and spurious emission under WCDMA-RMC, WCDMA-AMR & HSDPA, HSUPA mode, find the worst mode is WCDMA-RMC. Therefore, select WCDMA-RMC mode to do final test.

# 3.2.1 CONFIGURATION OF SYSTEM UNDER TEST

# 3.2.2 TEST MODE APPLICABILITY AND TESTED CHANNEL DETAIL

#### FOR GSM, GPRS & E-GPRS:

| EUT<br>CONFIGURE | APPLICABLE TO |          |          |          |          |       | DESCRIPTION |             |
|------------------|---------------|----------|----------|----------|----------|-------|-------------|-------------|
| MODE             | ОР            | FS       | ОВ       | BE       | CE       | RE<1G | RE≥1G       | DESCRIPTION |
| -                | <b>V</b>      | <b>√</b> | <b>V</b> | <b>√</b> | <b>√</b> | √     | <b>V</b>    | -           |

Where **OP**: Output power

OB: Occupied bandwidth

CE: Conducted spurious emissions

**RE≥1G:** Radiated emission above 1GHz

**FS:** Frequency stability **BE:** Band edge

RE<1G: Radiated emission below 1GHz

#### **OUTPUT POWER MEASUREMENT:**

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates, XYZ axis and antenna ports (if EUT with antenna diversity architecture).

Following channel(s) was (were) selected for the final test as listed below.

| AVAILABLE CHANNEL | TESTED CHANNEL | MODULATION TECHNOLOGY | AXIS |
|-------------------|----------------|-----------------------|------|
| 512 to 810        | 512, 661, 810  | GSM, GPRS, EGPRS      | Z    |

#### **FREQUENCY STABILITY MEASUREMENT:**

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations and antenna ports (if EUT with antenna diversity architecture).

Following channel(s) was (were) selected for the final test as listed below.

| AVAILABLE CHANNEL | TESTED CHANNEL | MODULATION TECHNOLOGY |
|-------------------|----------------|-----------------------|
| 512 to 810        | 661            | GSM                   |

# **OCCUPIED BANDWIDTH MEASUREMENT:**

This item includes all test value of each mode, but only includes spectrum plot of worst value of each mode.

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations and antenna ports (if EUT with antenna diversity architecture).

Following channel(s) was (were) selected for the final test as listed below.

| AVAILABLE CHANNEL | TESTED CHANNEL | MODULATION TECHNOLOGY |
|-------------------|----------------|-----------------------|
| 512 to 810        | 512, 661, 810  | GSM, GPRS, EGPRS      |

#### **BAND EDGE MEASUREMENT:**

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations and antenna ports (if EUT with antenna diversity architecture).

Following channel(s) was (were) selected for the final test as listed below.

| AVAILABLE CHANNEL | TESTED CHANNEL | MODULATION TECHNOLOGY |
|-------------------|----------------|-----------------------|
| 512 to 810        | 512, 810       | GSM, GPRS, EGPRS      |

### **CONDUCTED SPURIOUS EMISSIONS MEASUREMENT:**

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations and antenna ports (if EUT with antenna diversity architecture).

Following channel(s) was (were) selected for the final test as listed below.

| AVAILABLE CHANNEL | TESTED CHANNEL | MODULATION TECHNOLOGY |
|-------------------|----------------|-----------------------|
| 512 to 810        | 512, 661, 810  | GSM                   |

# **RADIATED EMISSION MEASUREMENT (BELOW 1 GHz):**

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates, XYZ axis and antenna ports (if EUT with antenna diversity architecture).

Following channel(s) was (were) selected for the final test as listed below.

| AVAILABLE CHANNEL | TESTED CHANNEL | MODULATION TECHNOLOGY | AXIS |
|-------------------|----------------|-----------------------|------|
| 512 to 810        | 810            | GSM                   | Z    |

#### **RADIATED EMISSION MEASUREMENT (ABOVE 1 GHz):**

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates, XYZ axis and antenna ports (if EUT with antenna diversity architecture).

Following channel(s) was (were) selected for the final test as listed below.

| AVAILABLE CHANNEL | TESTED CHANNEL | MODULATION TECHNOLOGY | AXIS |
|-------------------|----------------|-----------------------|------|
| 512 to 810        | 512, 661, 810  | GSM                   | Z    |

# TEST CONDITION:

#### 3.3 GENERAL DESCRIPTION OF APPLIED STANDARDS

The EUT is a RF product. According to the specifications of the manufacturer, it must comply with the requirements of the following standards:

FCC 47 CFR Part 2 FCC 47 CFR Part 24 ANSI C63.4-2003 ANSI/TIA/EIA-603-C 2004

**NOTE:** All test items have been performed and recorded as per the above standards.

# 3.4 DESCRIPTION OF SUPPORT UNITS

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

| NO. | PRODUCT                                    | BRAND | MODEL NO. | SERIAL NO. | FCC ID |
|-----|--|-------|-----------|------------|--------|
| 1   | UNIVERSAL RADIO<br>COMMUNICATION<br>TESTER | R&S   | CMU200    | 104484     | NA     |
| 2   | NJZ-2000 (GPRS+WCDMA<br>SIMULATOR)         | JRC   | NJZ-2000  | ET00054    | NA     |

| NO. | SIGNAL CABLE DESCRIPTION OF THE ABOVE SUPPORT UNITS |
|-----|---|
| 1   | NA  |
| 2   | NA  |

**NOTE 1:** All power cords of the above support units are non shielded (1.8m).

**NOTE 2:** Item 1-2 acted as a communication partners to transfer data.

# **4 TEST TYPES AND RESULTS**

### 4.1 OUTPUT POWER MEASUREMENT

### 4.1.1 LIMITS OF OUTPUT POWER MEASUREMENT

The radiated peak output power shall be according to the specific rule Part 24.232(b) that "Mobile / Portable station are limited to 2 watts e.i.r.p" and 24.232(c) specific that "Peak transmit power must be measure over any interval of continuous transmission using instrumentation calibration in terms of rms-equivalent voltage."

**NOTE:** 1. The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

- 2. The test was performed in HwaYa Chamber 9.
- 3. The horn antenna and HP preamplifier (model: 8449B) are used only for the measurement of emission frequency above 1GHz if tested.
- 4. The FCC Site Registration No. is 460141.
- 5. The IC Site Registration No. is IC 7450F-4.

#### 4.1.3 TEST PROCEDURES

#### **EIRP MEASUREMENT:**

- a. The power was measured with R&S Spectrum Analyzer. All measurements were done at 3 channels, 512, 661 and 810 (GSM, GPRS & E-GPRS) / 9262, 9400 and 9538 (WCDMA) (low, middle and high operational frequency range.) RWB and VBW is 1MHz for GSM/GPRS/EGPRS and 5MHz for WCDMA mode.
- b. Substitution method is used for E.I.R.P measurement. In the semi-anechoic chamber, EUT placed on the 0.8m height of Turn Table, rotated the table around 360 degrees to search the maximum radiation power and receiver antenna shall be rotated vertical and horizontal polarization and moved height from 1m to 4m to find the maximum polar radiated power. The "Read Value" is the spectrum reading the maximum power value.
- c. The substitution horn antenna is substituted for EUT at the same position and signals generator export the CW signal to the substitution antenna via a tx cable. Rotated the Turn Table and moved receiving antenna to find the maximum radiation power. Adjust output power level of S.G to get a Value of spectrum reading equal to "Read Value" of step c. Record the power level of S.G
- d. EIRP = Output power level of S.G TX cable loss + Antenna gain of substitution horn.

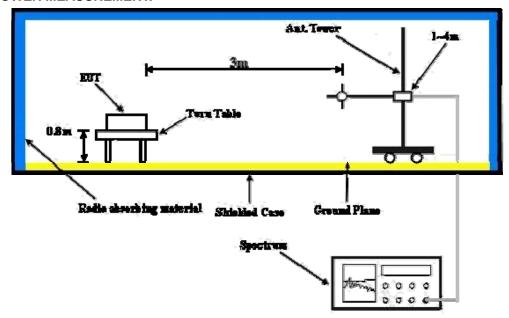

### **CONDUCTED POWER MEASUREMENT:**

- a. The EUT was set up for the maximum power with GSM, GPRS & EGPRS/WCDMA link data modulation and link up with simulator.
- b. Set the EUT to transmit under low, middle and high channel and record the power level shown on simulator.

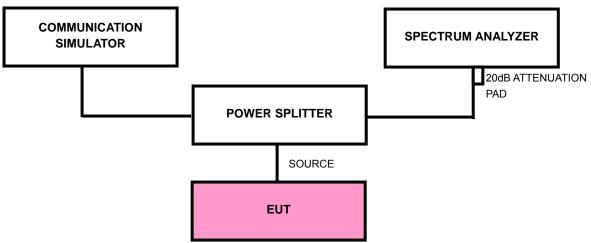

### 4.1.4 TEST SETUP

#### **EIRP POWER MEASUREMENT:**

For the actual test configuration, please refer to the attached file (Test Setup Photo).

# **CONDUCTED POWER MEASUREMENT:**

For the actual test configuration, please refer to the attached file (Test Setup Photo).

### 4.1.5 EUT OPERATING CONDITIONS

- a. The EUT makes a call to the communication simulator.
- b. The communication simulator station system controlled an EUT to export maximum output power under transmission mode and specific channel frequency.

# 4.1.6 TEST RESULTS

# FOR GSM, GPRS & E-GPRS:

#### **FOR GSM**

| CONDUCTED OUTPUT POWER  |        |             |       |       |       |

**REMARKS:** 1. Output Power (dBm) = Raw Value (dBm) + Correction Factor (dB).

- 2. Correction Factor (dB) = Power Splitter Loss (dB) + Cable Loss (dB).
- 3. Refer to SAR of WWAN test report to check conducted power of HSDPA and HSUPA.

#### 4.2 FREQUENCY STABILITY MEASUREMENT

# 4.2.1 LIMITS OF FREQUENCY STABILITY MEASUREMENT

According to the FCC part 24.235 shall be tested the frequency stability. The rule is defined that" The frequency stability shall be sufficient to ensure that the fundamental emission stays within the authorized frequency block." The frequency error rate is according to the JTC standard that the frequency error rate shall be accurate to within 2.5ppm of the received frequency from the base station. The test extreme voltage is according to the 2.1055(d)(1) Vary primary supply voltage from 85 to 115 percent of the nominal value for other than hand carried battery equipment and the extreme temperature rule is comply with the  $2.1055(a)(1) -30^{\circ}C \sim 55^{\circ}C$ .

**NOTE:** The calibration interval of the above test instruments is 12 months. And the calibrations are traceable to NML/ROC and NIST/USA.

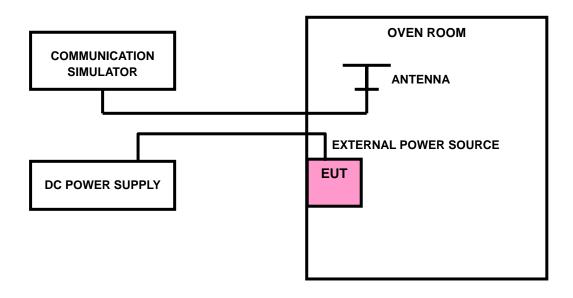

### 4.2.3 TEST PROCEDURE

- a. Because of the measure the carrier frequency under the condition of the AFC lock, it shall be used the mobile station in the GPRS / WCDMA link mode. This is accomplished with the use of the R&S CMU200 / JRC NJZ-2000 simulator station. The oven room could control the temperatures and humidity. The GPRS link channel is the 190 and the WCDMA link channel is the 9400.
- b. Power must be removed when changing from one temperature to another or one voltage to another voltage. Power warm up is at least 15 min and power applied should perform before recording frequency error.
- c. EUT is connected the external power supply to control the DC input power. The various Volts from the minimum 3.6Volts to 4.2Volts. Each step shall be record the frequency error rate.
- d. The temperature range step is 10 degrees in this test items. All temperature levels shall be hold the +/-0.5°C during the measurement testing.
- e. The each temperature step shall be at least 0.5 hours, consider the EUT could be test under the stability condition.

**NOTE:** The frequency error was recorded frequency error from the GSM simulator.

#### 4.2.4 TEST SETUP

# 4.2.5 TEST RESULTS

# FOR GSM:

| AFC FREQUENCY ERROR vs. VOLTAGE  |    |       |     |  |
|--|----|-------|-----|--|
| VOLTAGE (Volts) FREQUENCY ERROR (Hz) FREQUENCY ERROR (ppm) LIMIT (ppm) |    |       |     |  |
| 4.2  | 16 | 0.009 | 2.5 |  |
| 3.6  | 14 | 0.007 | 2.5 |  |

**NOTE:** The applicant defined the normal working voltage of the battery is from 3.6Vdc to 4.2Vdc.

|            | AFC FREQUENCY ERROR vs. TEMP. |                       |             |  |  |

## 4.3 OCCUPIED BANDWIDTH MEASUREMENT

# 4.3.1 LIMITS OF OCCUPIED BANDWIDTH MEASUREMENT

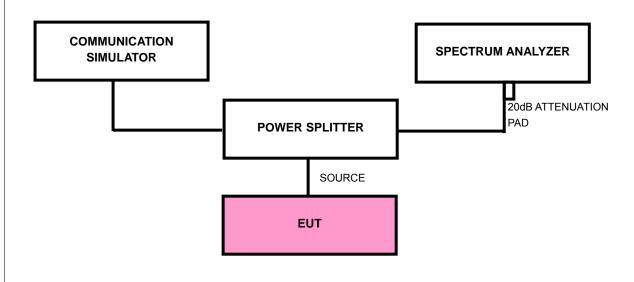

The width of a frequency band such that, below the lower and above the upper frequency limits, the mean powers emitted are each equal to a specified percentage 0.5 %of the totalmean power of a given emission.

# 4.3.2 TEST INSTRUMENTS

| DESCRIPTION & MANUFACTURER   | MODEL NO.    | SERIAL NO. | DATE OF CALIBRATION | DUE DATE OF CALIBRATION |

# 4.3.3 TEST SETUP

### 4.3.4 TEST PROCEDURES

- a. The EUT makes a call to the communication simulator. The power was measured with R&S Spectrum Analyzer. All measurements were done at 3 channels, 512, 661 and 810 (GSM/GPRS / E-GPRS) / 9262, 9400 and 9538 (WCDMA) (low, middle and high operational frequency range.)
- b. The conducted occupied bandwidth used the power splitter via EUT RF power connector between simulation base station and spectrum analyzer. This splitter loss and cable loss are the worst loss 25 dB in the transmitted path track.
- c. The communication simulator station system controlled a EUT to export maximum output power under transmission mode and specific channel frequency. Use OBW measurement function of Spectrum analyzer to measure 99 % occupied bandwidth.

# 4.3.5 EUT OPERATING CONDITION

- a. The EUT makes a call to the communication simulator.
- The communication simulator station system controlled a EUT to export maximum and minimum output power under transmission mode and specific channel frequency.

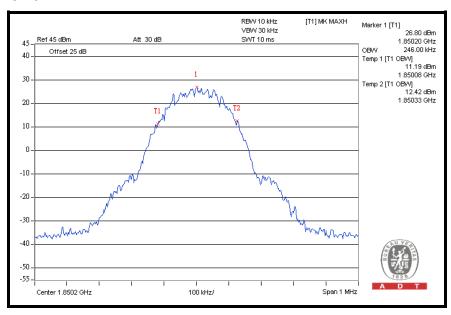

# 4.3.6 TEST RESULTS

| 9538    | 1907.6             | 4.14                            |

# 4.4 BAND EDGE MEASUREMENT

# 4.4.1 LIMITS OF BAND EDGE MEASUREMENT

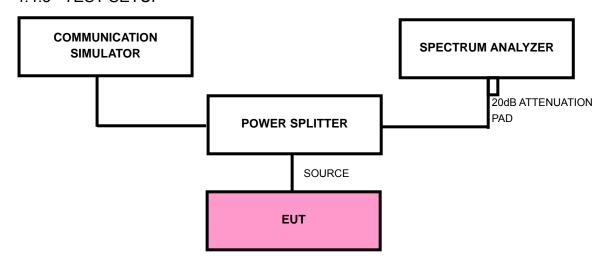

According to FCC 24.238(a) specified that power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least 43 + 10 log(P) dB. In the 1 MHz bands immediately outside and adjacent to the frequency block a resolution bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed.

# 4.4.3 TEST SETUP

# 4.4.4 TEST PROCEDURES

- a. The EUT makes a call to the communication simulator. The power was measured with R&S Spectrum Analyzer. All measurements were done at 2 channels, 512 and 810 (GSM/GPRS/ E-GPRS) / 9262 and 9538 (WCDMA) (low and high operational frequency range.)
- b. The band edge measurement used the power splitter via EUT RF power connector between simulation base station and spectrum analyzer. This splitter loss and cable loss are the worst loss 25dB in the transmitted path track.
- c. The center frequency of spectrum is the band edge frequency and span is 1.5 MHz. RB of the spectrum is 3kHz and VB of the spectrum is 10kHz (GSM/GPRS/E-GPRS).
- d. The center frequency of spectrum is the band edge frequency and span is 10 MHz. RB of the spectrum is 100kHz and VB of the spectrum is 300kHz (WCDMA).
- e. Record the max trace plot into the test report.

# 4.4.5 EUT OPERATING CONDITION

- a. The EUT makes a call to the communication simulator.
- The communication simulator station system controlled an EUT to export maximum output power under transmission mode and specific channel frequency.

# 4.5 CONDUCTED SPURIOUS EMISSIONS

# 4.5.1 LIMITS OF CONDUCTED SPURIOUS EMISSIONS MEASUREMENT

In the FCC 24.238(a), On any frequency outside a licensee's frequency block within USPCS spectrum, the power of any emission shall be attenuated below the transmitter power (P) by at least 43 +10 log (P) dB. The specified minimum attenuation becomes 43dB and the limit of emission equal to –13dBm.

**NOTE:** The calibration interval of the above test instruments is 12 months. And the calibrations are traceable to NML/ROC and NIST/USA.

#### 4.5.3 TEST PROCEDURE

- a. The EUT makes a phone call to the communication simulator. The power was measured with R&S Spectrum Analyzer. All measurements were done at 3 channels, 512, 661 and 810 (GSM) / 9262, 9400 and 9538 (WCDMA) (low, middle and high operational frequency range.)
- b. The conducted spurious emission used the power splitter via EUT RF power connector between simulation base station and spectrum analyzer. This splitter loss and cable loss are the worst loss 25dB in the transmitted path track.
- c. When the spectrum scanned from 9kHz to 3GHz, it shall be connected to the band reject filter attenuated the carried frequency. The spectrum set RB=1MHz, VB=3MHz.
- d. When the spectrum scanned from 3kHz to 20GHz, it shall be connected to the high pass filter attenuated the carried frequency. The spectrum set RB=1MHz, VB=3MHz.

#### 4.5.4 TEST SETUP

# 4.5.5 EUT OPERATING CONDITIONS

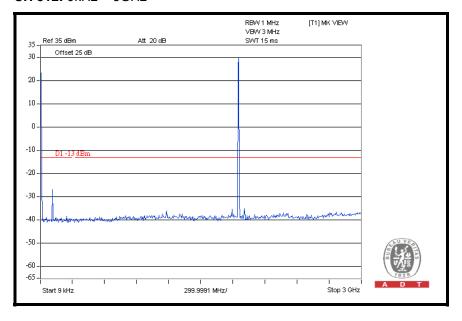

- a. The EUT makes a call to the communication simulator.
- The communication simulator station system controlled an EUT to export maximum output power under transmission mode and specific channel frequency.

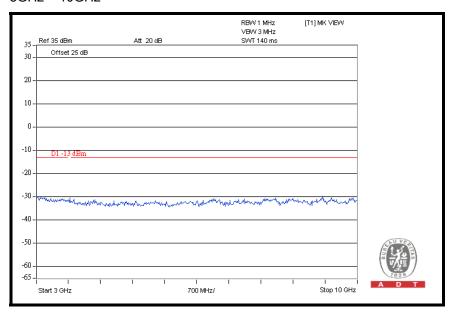

# 4.5.6 TEST RESULTS

# FOR GSM:

**CH 512:** 9kHz ~ 3GHz

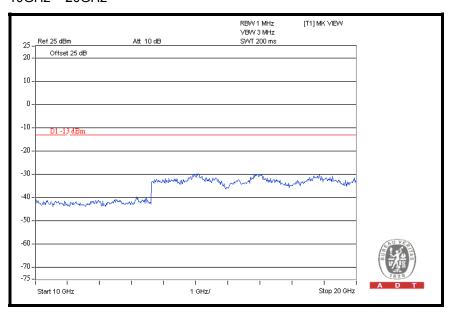

# 3GHz ~ 10GHz

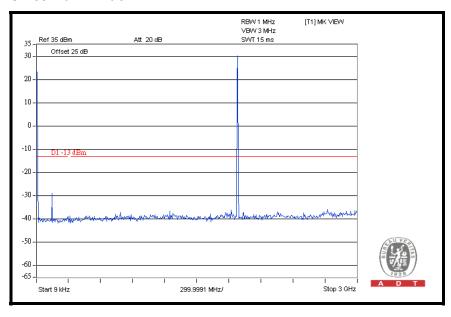

# 10GHz ~ 20GHz

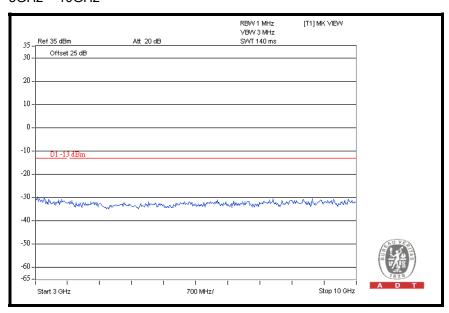

# **CH 661:** 9kHz ~ 3GHz

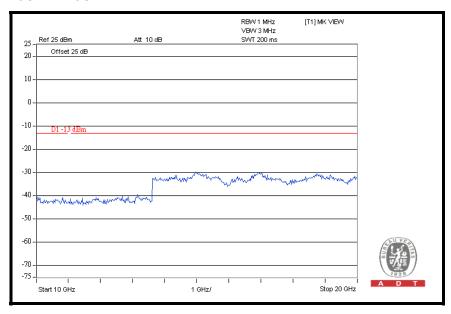

# 3GHz ~ 10GHz

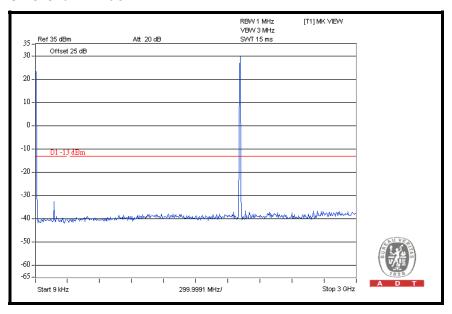

# 10GHz ~ 20GHz

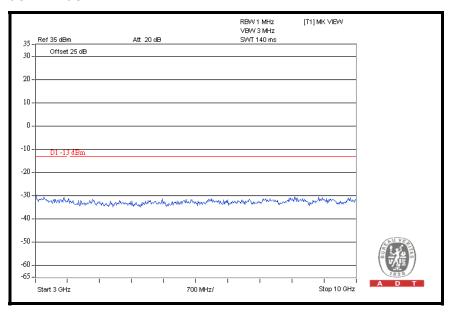

# **CH 810:** 9kHz ~ 3GHz

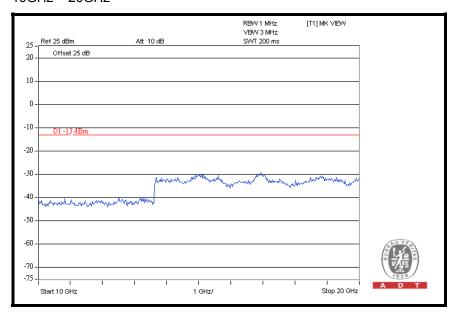

# 3GHz ~ 10GHz

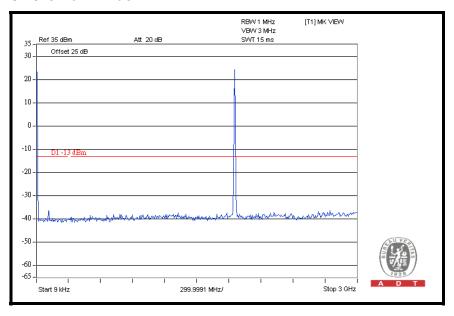

# 10GHz ~ 20GHz

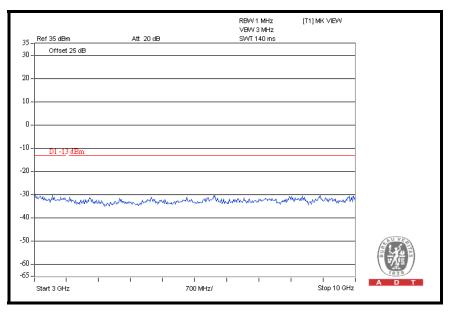

# FOR WCDMA:

**CH 9262:** 9kHz ~ 3GHz

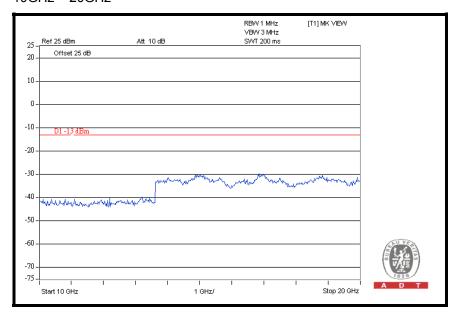

# 3GHz ~ 10GHz

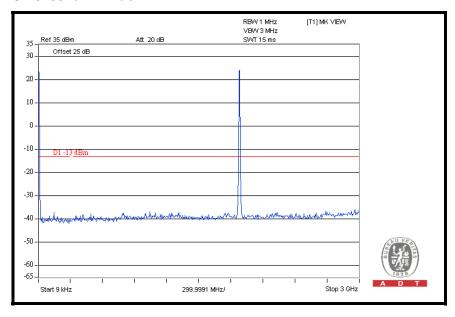

# 10GHz ~ 20GHz

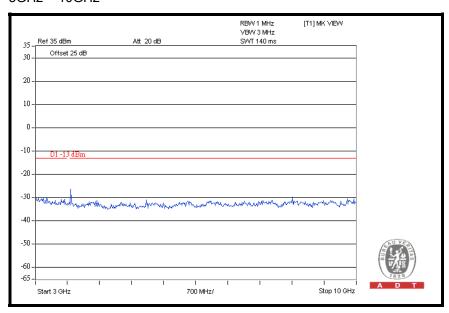

# **CH 9400:** 9kHz ~ 3GHz

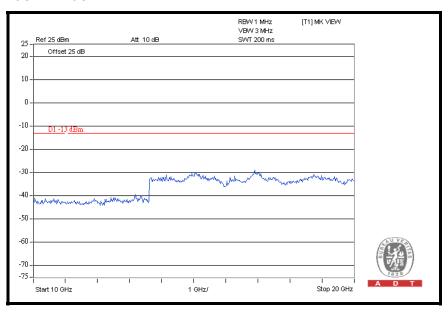

# 3GHz ~ 10GHz

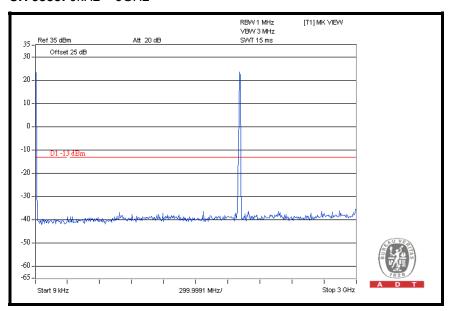

# 10GHz ~ 20GHz

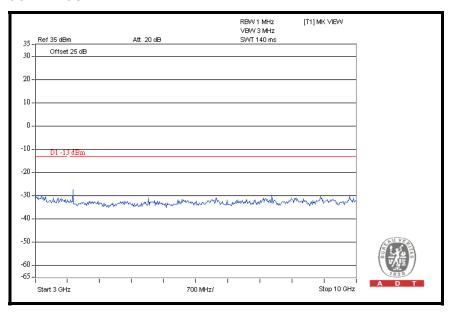

# **CH 9538:** 9kHz ~ 3GHz

# 3GHz ~ 10GHz

# 10GHz ~ 20GHz

# 4.6 RADIATED EMISSION MEASUREMENT (BELOW 1GHz)

#### 4.6.1 LIMITS OF RADIATED EMISSION MEASUREMENT

In the FCC 24.238(a), On any frequency outside a licensee's frequency block within USPCS spectrum, the power of any emission shall be attenuated below the transmitter power (P) by at least 43 +10 log (P) dB. The emission of limit equal to –13dBm. So the limit of emission is the same absolute specified line.

| LIMIT (dBm) | EQUIVALENT FIELD STRENGTH AT 3m<br>(dBuV/m) (NOTE) |  |  |
|-------------|--|--|--|
| -13         | 82.2   |  |  |

**NOTE:** The following formula is used to convert the equipment radiated power to field strength.

E = [1000000 I (30P)] / 3 uV/m, where P is Watts.

# 4.6.2 TEST INSTRUMENTS

Same as 4.1.2.

#### 4.6.3 TEST PROCEDURES

- a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meters semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. The antenna is a broadband antenna, and its height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
- f. If the emission level of the EUT in peak mode was lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.

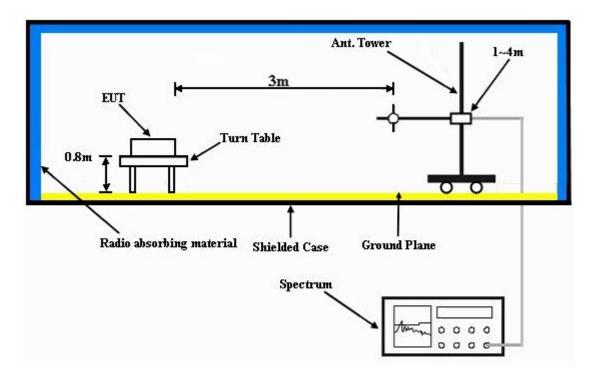

**NOTE:** The resolution bandwidth of spectrum analyzer is 1 MHz and the video bandwidth is 3 MHz.

#### 4.6.4 DEVIATION FROM TEST STANDARD

No deviation

# 4.6.5 TEST SETUP

For the actual test configuration, please refer to the attached file (Test Setup Photo).

# 4.6.6 EUT OPERATING CONDITIONS

- a. The EUT makes a call to the communication simulator.
- The communication simulator station system controlled an EUT to export maximum output power under transmission mode and specific channel frequency.

# NOTE:

- 1. Emission level (dBuV/m) = Raw Value (dBuV) + Correction Factor (dB).
- 2. Correction Factor (dB/m) = Antenna Factor (dB/m) + Cable Factor (dB).
- 3. The other emission levels were very low against the limit.
- 4. Margin value = Emission level Limit value.
- 5. This is valid for all 3 channels.

# 4.7 RADIATED EMISSION MEASUREMENT (ABOVE 1GHz)

# 4.7.1 LIMITS OF RADIATED EMISSION MEASUREMENT

In the FCC 24.238(a), On any frequency outside a licensee's frequency block within USPCS spectrum, the power of any emission shall be attenuated below the transmitter power (P) by at least 43 +10 log (P) dB. The specified minimum attenuation becomes 43dB and the limit of emission equal to –13dBm.

# 4.7.2 TEST INSTRUMENTS

Same as 4.1.2.

#### 4.7.3 TEST PROCEDURES

- a. Substitution method is used for E.I.R.P measurement. In the semi-anechoic chamber, EUT placed on the 0.8m height of Turn Table, rotated the table around 360 degrees to search the maximum radiation power and receiver antenna shall be rotated vertical and horizontal polarization and moved height from 1m to 4m to find the maximum polar radiated power. The "Read Value" is the spectrum reading the maximum power value.
- b. The substitution horn antenna is substituted for EUT at the same position and signals generator export the CW signal to the substitution antenna via a TX cable. Rotated the Turn Table and moved receiving antenna to find the maximum radiation power. Adjust output power level of S.G to get a Value of spectrum reading equal to "Read Value" of step a. Record the power level of S.G
- c. EIRP = Output power level of S.G TX cable loss + Antenna gain of substitution horn.

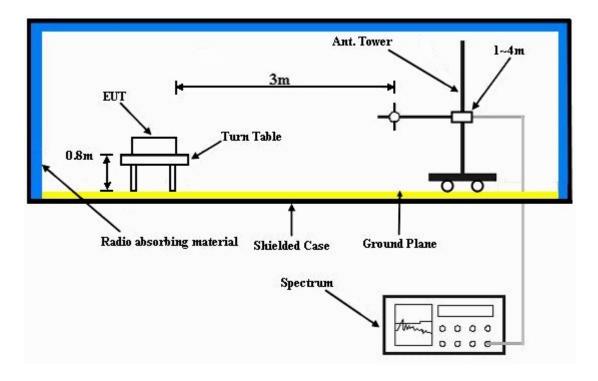

**NOTE:** The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 1MHz/3MHz.

#### 4.7.4 DEVIATION FROM TEST STANDARD

No deviation

# 4.7.5 TEST SETUP

For the actual test configuration, please refer to the attached file (Test Setup Photo).

# 4.7.6 EUT OPERATING CONDITIONS

- a. The EUT makes a call to the communication simulator.
- b. The communication simulator station system controlled an EUT to export maximum output power under transmission mode and specific channel frequency.

Report No.: RF110418C16-3 71 Report Format Version 4.0.0

# **6 INFORMATION ON THE TESTING LABORATORIES**

We, Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch, were founded in 1988 to provide our best service in EMC, Radio, Telecom and Safety consultation. Our laboratories are accredited and approved according to ISO/IEC 17025.

Copies of accreditation certificates of our laboratories obtained from approval agencies can be downloaded from our web site: <a href="www.adt.com.tw/index.5/phtml">www.adt.com.tw/index.5/phtml</a>. If you have any comments, please feel free to contact us at the following:
