## Declaration – MIF for HAC RF Interference Evaluation

To Whom It May Concern,

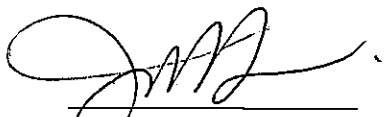

This device, with FCC ID: **NM8PM33100**, Hearing Aid Compatibility Requirement is going to be certified under **ANSI C63.19-2011 version per Part 20.19**.

For Radio Frequency Interference, Speag's Audio Interference Analyzer (AIA) or other indirect or direct measurement was not used to determine the M rating.

The M rating was determined by measuring the maximum steady state average E-field values in dB (V/m) as documented in this report (report No.: **SA121225C13-1**) and adding the MIF value in dB (V/m) using pre-determined values provided by Speag under **UID 10021 V3.1.1 (12.11.2012) / UID 10011 V3.1.1 (07.11.2012)**. The Speag-reference documentation for supporting the pre-determined MIF value is Schmid & Partner Engineering AG, **DASY5 Manual V5.2, December 2012**.

We are confirming that the Speag air interface simulation files and values used for the MIF vales represent the operational modes for Hearing Aid Capability for this handset.

Sincerely Yours,

**Jeffrey Chen**
