Remark:
Model No.: RA900, SE900
The model RA900 was performed the full tests, the model SE900 was tested the Conducted Peak Output Power, Radiated Spurious Emissions for discrepancy, since the circuitry design, PCB layout, electrical components used, internal wiring and functions were identical for the above models, with difference being pressure sensor. Both models are use same main PCB for production, the difference is that RA900 need to SMT related components on the main PCB and sub-pcb for pressure sensor, the others are same as SE900.

4   SAR Evaluation

4.1   RF Exposure Compliance Requirement

4.1.1 Standard Requirement

15.247(b)(4) requirement:

The conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6dBi. Except as shown in paragraph (c) of this section. if transmitting antennas of directional gain greater than 6dBi are used. the conducted output power from the intentional radiator shall be reduced below the stated values in paragraphs (b)(1). (b)(2). and (b)(3) of this section. as appropriate. by the amount in dB that the directional gain of the antenna exceeds 6dBi.

4.1.2 Limits

According to KDB447498 D01, SAR evaluation is typically not required when the maximum transmitter and antenna output power are ≤ 60/f(GHz) mW.

4.1.3 EUT RF Exposure

RA900

The Max Conducted Peak Output Power is -0.81dBm(0.8299mW) in lowest channel;

The best case gain of the antenna is -1.5dBi.

-1.5dBi logarithmic terms convert to numeric result is nearly 0.7079.

According to the formula. calculate the EIRP test result:

EIRP= P x G = 0.8299mW x 0.7079 = 0.5875mW ①

SAR requirement:

S= 60 / f(GHz) = 60/2.402 = 24.98mW ② ;

① < ②.

So the SAR report is not required.

SE900

The Max Conducted Peak Output Power is -0.28dBm(0.9376mW) in lowest channel;

The best case gain of the antenna is -1.5dBi.

-1.5dBi logarithmic terms convert to numeric result is nearly 0.7079.

According to the formula. calculate the EIRP test result:

EIRP= P x G = 0.8376mW x 0.7079 = 0.6637mW ①

SAR requirement:

S= 60 / f(GHz) = 60/2.402 = 24.98mW ② ;

① < ②.

So the SAR report is not required.
