

Response to EA753538

1. The customer says that SAR testing is not required. The handset's average output power is less than 80 mW, which is much less than the 300 mW guideline given in FCC OET-65 document.
2. The schematics are readable if you use the zoom feature in Word and increase the size to 500%. Please let me know if this is not acceptable.
3. A new test report has been uploaded.
