Cover letter

The TC690 module is available in two frequency range versions.
The first version called TC69002_ operates in the range 902~918MHz.
The second version called TC69001_ operates in the range 912~928MHz.
Both versions consist of the same hardware.
The only difference is the frequency programming and receiver conversion mode in the software.
The last digit is reserved for the revision.

Additional HBC - Labelling

The TC690 module will be labelled as TC690Lxx.HEX for the range 902~918MHz and TC690Hxx.HEX for the range 912~928MHz where „xx" means the software revision code (i.e. TC690H12.HEX for the actual version in the range 912~928MHz).
Additional, a serial number in hexadecimal code (i.e. 00 2d5h) will be included.

The label will be positioned on the backside of the printed circuit board in the lower half of the module.

IC – Certification No.

2977A-TC690
