Kobo eReader basics

Turn your Kobo eReader on and off

The power button is located on the side of the eReader.

You can turn your eReader off or put it to sleep when you're not reading. Both help your battery last longer.

The main difference is that when you put your eReader to sleep and then wake it up, you go directly back to the last screen you saw. This could be a page in the book, the Kobo Store, or an area in your library. If you turn your eReader off, you'll go back to your Home page when you turn it on again.

Note that putting your eReader to sleep can interrupt things like library syncing and wireless connections.

To turn on your eReader:

- Press the power button and hold until your eReader turns on.

To turn off your eReader:

- Press the power button and hold until you see a 'Powered off' screen.

To put your eReader to sleep:

- Press the power button and release quickly.

To wake your eReader from sleep:

- Press the power button and release.

Charge your eReader

Before using your Kobo eReader for the first time, you should charge it for at least one hour.

A fully charged Kobo eReader battery can last up to two months depending on how frequently you use your eReader. Charge your Kobo eReader with the supplied cable if possible.

Follow these steps to charge your eReader.

1. Turn on your computer.
2. Connect your cable to your eReader and your computer.

You can continue reading while your eReader charges. The battery's charge status appears in the top-right corner of the screen.

You can also charge your Kobo eReader with any 5V, 1A USB adapter.

Note: If you're travelling to a country with different electrical systems, be sure you have the proper converter before you charge your Kobo eReader using a power outlet.
