

Cover Letter

To: To whom it may concern

From: John Dorsey

Subject: Part 24 submittal of our DAS19-4-X system

I have electronically submitted to the FCC a total of 26 items including this cover letter for approval of our modified 1900 MHz Distributed Antenna System. All items were submitted under the following identifiers:

Form 731 Confirmation Number: EA96135

FCC ID: NOONOO-DAS19-4-X (This number will need to be corrected as stated in one of the attachments.)

Some of the items such as photos and labels are included as part of the reports. The system photos are part of the EMC Technology Services report and the labels are part of the LGC internal report.

We have submitted data for Uplink and Downlink modes of CDMA, TDMA, and GSM modulation schemes. We used B, D, and F Band units to gather data as those were the units that were available. We are a small company and have minimal units to work with most of the time.

I hope that everything is found to be in order. If not or if you have any questions, please contact me.

Thanks for your time.
