TEST SET-UP:

Transmitter Occupied Bandwidth for Emission Designator

Modulation description. This equipment is not provided with hardware audio low-pass filters, the transmit filter is a digital 80 tap FIR filter implemented in the firmware.

The digital filter is based on a convolution between two filters, the former built on the raised cosine filter equation and the later built on a brick wall pulse shaping on symbol frequency. The FIR is qualified on the resulting 3dB cut-of frequency. For 9600bps on a half channel, the transmitter filter is a Raised Cosine with Alpha = 1.0, convolved with a rectangular pulse of duration 1/9600 sec. For 4800 bps on a half channel, the transmit filter is a Raised Cosine with Alpha = 1.0.

The transmitter deviation level is referenced to a test tone on 1200Hz generated internally. The deviation level and digital filter cutoff frequency are set according to the bit rate selected and channel bandwidth as follows:

Bit rate	Baud rate	FIR filter's 3dB cut-off frequency	Deviation
9600 bps	9600 bauds	4.4 kHz	± 3.0 kHz
4800 bps	4800 bauds	2.4 kHz	± 4.0 kHz

The pseudo random test pattern generated by issuing the K command is created by pseudo random bit generator with a repetition period of $(2^{32})-1$ bits.

Baud Rate	FIR filter's 3dB cut-off Frequency kHz	Bit Rate bps	Deviation on Reference test tone kHz	Peak deviation On random data kHz	Occupied Bandwidth kHz	Authorized Bandwidth kHz	Proposed Emission Designator

Transmitter Spurious and Harmonic Outputs

MEASUREMENT PROCEDURE:

1. The transmitter carrier output frequency is 137.000, 162.000, 150.000, and 174.000. The reference oscillator frequency is 16.000 MHz. The transmitter has voltage levels at 12.5 Volts and 7.2 Volts.
2. After the carrier reference was established on the spectrum analyzer, the notch filter was adjusted to null the carrier fundamental to extend the range of the spectrum analyzer for harmonic measurements.
3. At each spurious frequency, generation substitution was used to establish the true spurious level.
4. The spectrum was scanned to the 10th harmonic
