

Response to FCC correspondence Ref. No. 1676

1. Grant corrected.
2. The test laboratory has made the following argument:

“According to Part 2.1055(a)(2) it specifies the temperature range as -20 to +50 for "equipment to be licensed for use above 952 MHz at operational fixed stations in all services". Since this is a PCS base station transmitter, wouldn't this range be appropriate?”

3. New internal photos exhibit has been uploaded.
