6th July 2001

Dear Mr. Fisher,

We would like to request that the circuit diagrams for the HXiR hand held transmitter, submitted for FCC type approval to part 74, be withheld from public inspection.

The circuit diagrams that are held in the circuit diagrams folder, are commercially sensitive, and if they were available for public inspection it would result in substantial competitive harm.

Our competitors widely acknowledge that the performance of Audio Limited's wireless microphone systems, are among the best in the world, and therefore if they were able to freely obtain the information contained within the circuit diagrams folder it would greatly harm our share of the market.

We have very tight controls to ensure that this information does not fall into the wrong hands.

We would very much appreciate your assistance in this matter.

Yours sincerely,

Kishore Patel
Managing Director.
