RF Exposure Calculations:

The following information provides the minimum separation distance for each of the antennas provided with the **COMPACTRF900** module, as calculated from **FCC OET 65 Appendix B, Table 1B** Guidelines for General Population/Uncontrolled Exposure. This calculation is based on the highest EIRP possible from the system, considering maximum power and antenna gain. The formula used was:

 $S = (Po*G)/(4*pi*r^2)$

For: 14 dB Yagi Antenna r = 18 cm
2.5dB Omni Antenna r = 15 cm
6 dB Omni Antenna r = 23 cm

The following statement will be presented in the **COMPACTRF-900** User Manual:

WARNING

In order to comply with the FCC/IC adopted RF exposure requirements, this transmitter system will be installed by the manufacturer's resaler professional. Installation of all antennas must be performed in a manner that will provide at least 23 cm clearance from the front radiating apperature, to any user or member of the public.
