To whom it may concern:

Zebra Technologies Corporation, hereby requests a Permissive Change Class II of the radio equipment certification for the WPT-3200 certification number, FCC ID: NSQWPT-3200. This product differs from the originally approved product in the following manor:

- (a) Functional capabilities. An additional modulation, along with operating frequency, is added as an option. Only one of these modes can be used at any given time. There is no simultaneous of these modes.
 - a. The device can transmit as originally certified, or
 - b. The device can transmit on a single frequency (127 kHz) within the same band, using ASK modulation.
- (b) The same loop antenna is used.
- (c) There are no other changes made to the device.

I do attest that the Field strength and/or RF Output readings remained the same or are lower than the originally approved product and that they did not increase therefore qualifying this product for this application type.

Sincerely,

Guzvaldo Medina
Senior Compliance Engineer
