

Nemko Test Report: 52047RUS1

Applicant: Communication Components, Inc.
89 Leuning Street
2nd Floor
Hackensack, NJ 07606

**Equipment Under Test:
(E.U.T.)** DAC-850-125

In Accordance With: **FCC Part 22, Subpart H**
850 MHz Cellular Band Amplifier

Tested By: Nemko USA, Inc.
802 N. Kealy
Lewisville, TX
75057-3136

Authorized By: 
Tom Tidwell, Frontline Group Manager

Date: 25 November, 2005

Section 1. Summary of Test Results

Manufacturer: Communication Components, Inc.
Model No.: DAC-850-125
Serial No.: A006936

General: **All measurements are traceable to national standards.**

These tests were conducted on a sample of the equipment for the purpose of demonstrating compliance with FCC Part 22, Subpart H.

THIS TEST REPORT RELATES ONLY TO THE ITEM(S) TESTED.

THE FOLLOWING DEVIATIONS FROM, ADDITIONS TO, OR EXCLUSIONS FROM THE TEST SPECIFICATIONS HAVE BEEN MADE. NONE

Nemko USA Inc. authorizes the above named company to reproduce this report provided it is reproduced in its entirety and for use by the company's employees only.

Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility of such third parties. Nemko USA Inc. accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report. This report applies only to the items tested.

Summary Of Test Data

NAME OF TEST	PARA. NO.	SPEC.	RESULT
RF Power Output	22.913(a)	500W ERP	Complies
Occupied Bandwidth	22.917(c)	Input/Output	Complies
Spurious Emissions at Antenna Terminals	22.917	-13 dBm	Complies
Field Strength of Spurious Emissions	22.917	-13 dBm E.I.R.P.	Complies
Frequency Stability	22.355	1.5 ppm	NA

Footnotes

:

- (1) Device does not demodulate input RF. The device is a power amplifier unit designed to integrate into a BTS.

Measurement uncertainty for each test configuration is expressed to 95% probability.

.

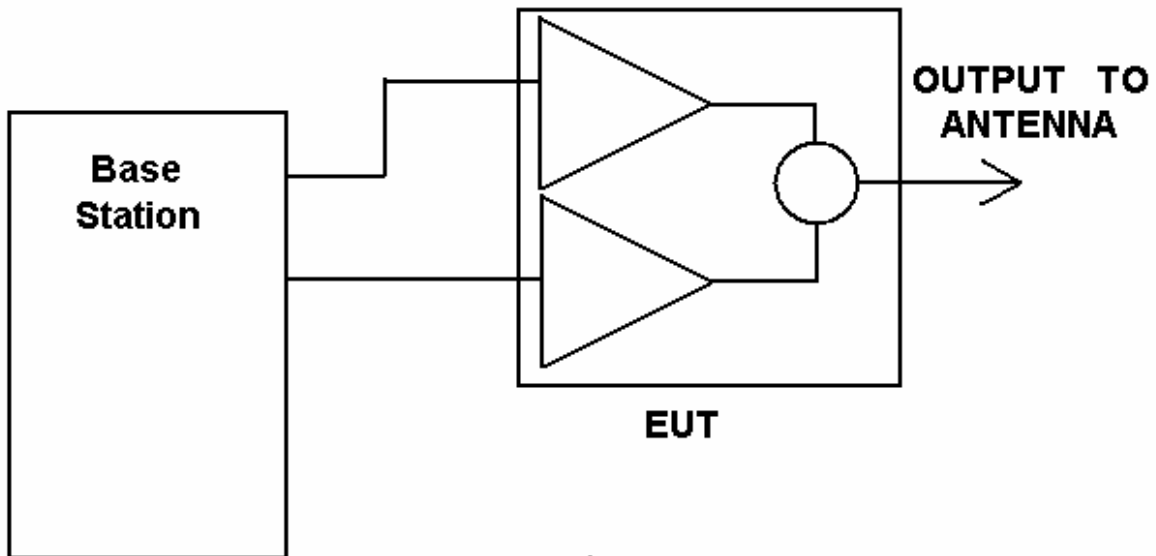

Section 2. General Equipment Specification

Supply Voltage Input:	24 Vdc				
Frequency Range:	869.2 to 893.8 MHz				
	Note: At the highest and lowest channels, the power output must be reduced to 3 Watts for GSM and 5.8 Watts for EDGE modulations to achieve bandedge compliance.				
Type of Modulation and Designator:	CDMA (F9W) <input type="checkbox"/>	GSM (G7W) <input checked="" type="checkbox"/>	NADC (DXW) <input type="checkbox"/>	EDGE (G7W) <input checked="" type="checkbox"/>	AMPS (F8W, F1D) <input type="checkbox"/>
Output Impedance:	50 ohms				
RF Output (Rated):	Downlink:	Per Channel:	62.5	W	
		Total:	125	W	
	Uplink:	Per Channel:	NA	W	
		Total:	NA	W	
Frequency Translation:	F1-F1	F1-F2	N/A		
The device is simply an amplifier and does not translate the frequency.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>		
Band Selection:	Software	Duplexer Change	Fullband Coverage		
	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>		

Description of Operation

The device is a base station amplifier operating in the 850 MHz cellular band utilizing GSM and GSM EDGE technology. Each input outputs 62.5 Watts single carrier only and input into a combiner prior to output. The device is rated at 125 Watts combined power. Operation on the lowest and highest defined channels requires a reduction in rf power output to 3 watts GSM and 5 watts for EDGE modulation.

System Diagram

Section 3. RF Power Output

NAME OF TEST: RF Power Output	PARA. NO.: 2.1046
TESTED BY: David Light	DATE: 26 October 2005

Test Results: Complies.

Test Data:

Modulation Type	Per Channel Power Output (dBm)	Composite Power Output (dBm)	Per Channel Power Output (Watts)	Composite Power Output (Watts)
GSM	47.96	50.96	62.5	125
EDGE	47.96	50.96	62.5	125
GSM (Reduced)	34.8	-	3.0	-
EDGE (Reduced)	37.6	-	5.8	-

Note: RF power output must be reduced at 869.2 and 893.8 MHz (center of lowest and highest channels) to 3 Watts for GSM and 5.8 Watts for EDGE modulations to adhere to bandedge requirements.

FCC PART 22, SUBPART H

850 MHz Cellular Band Amplifier

EQUIPMENT: DAC-850-125

Test Report No.: 52047RUS1

ANNEX A - TEST DETAILS

NAME OF TEST: RF Power Output	PARA. NO.: 2.1046
--------------------------------------	--------------------------

Minimum Standard: Para. No. 22.913(a). The maximum effective radiated power (ERP) of base transmitters and cellular repeaters must not exceed 500 watts.

Method of Measurement:

Detachable Antenna:

The peak power at antenna terminals is measured using an in-line peak power meter or a spectrum analyzer with sufficient bandwidth. Power output is measured with the maximum rated input level.

Integral Antenna:

TIA/EIA-603-1992, Section 2.2.12

The antenna substitution method was used to determine the equivalent radiated power at spurious frequencies. The spurious emissions were measured at a distance of 3 meters. The EUT was then replaced with a reference substitution antenna with a known gain referenced to a dipole. This antenna was fed with a signal at the spurious frequency. The level of the signal was adjusted to repeat the previously measured level. The resulting erp is the signal level fed to the reference antenna corrected for gain referenced to a dipole.

Nemko USA, Inc.

FCC PART 22, SUBPART H

850 MHz Cellular Band Amplifier

EQUIPMENT: DAC-850-125

Test Report No.: 52047RUS1

NAME OF TEST: Occupied Bandwidth

PARA. NO.: 2.1049

Minimum Standard: Not defined by FCC. Input vs. Output.

Method Of Measurement:

Spectrum Analyzer Settings:

RBW: 3 kHz

VBW: \geq RBW

Span: 1 MHz

Sweep: Auto

NAME OF TEST: Spurious Emission at Antenna Terminals	PARA. NO.: 2.1051
---	--------------------------

Minimum Standard:

Para. No. 22.917(a). Out of band emissions. The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least $43 + 10 \log(P)$ dB. This is equivalent to -13 dBm absolute power.

Method Of Measurement:

Spectrum Analyzer Settings:

RBW: >100 kHz below 1000 MHz / 1 MHz above 1000 MHz

VBW: \geq RBW

Start Frequency: 30 MHz

Stop Frequency: 9 GHz

Sweep: Auto

NAME OF TEST: Field Strength of Spurious Radiation

PARA. NO.: 2.1053

Minimum Standard: Para. No. 22.917(a). Out of band emissions. The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least $43 + 10 \log(P)$ dB. This is equivalent to -13 dBm absolute power.

Test Method:

TIA/EIA-603-1992, Section 2.2.12

The antenna substitution method was used to determine the equivalent radiated power at spurious frequencies. The spurious emissions were measured at a distance of 3 meters. The EUT was then replaced with a reference substitution antenna with a known gain referenced to a dipole. This antenna was fed with a signal at the spurious frequency. The level of the signal was adjusted to repeat the previously measured level. The resulting erp is the signal level fed to the reference antenna corrected for gain referenced to a dipole.

NAME OF TEST: Frequency Stability	PARA. NO.: 2.1055
--	--------------------------

Minimum Standard: Para. No. 22.355. The transmitter carrier frequency shall remain within the tolerances given in Table C-1.

Table C-1

Freq. Range (MHz)	Base, fixed	Mobile > 3 W	Mobile ≤ 3 W
821 to 896	1.5	2.5	2.5

Method Of Measurement:

Frequency Stability With Voltage Variation:

The E.U.T. is placed in an environmental chamber and allowed to stabilize at +20 degrees Celsius for at least 15 minutes. The frequency counter and signal generator are phase locked with the same 10 MHz reference frequency by connecting the 10 MHz ref. out of the counter to the 10 MHz ref, in of the signal generator. With the voltage input to the E.U.T. set to 85% S.T.V., the frequency is measured in 30 second intervals for a period of 5 minutes. This procedure is repeated at 100% S.T.V. and 115% S.T.V.

Frequency Stability With Temperature Variation:

The input voltage to the E.U.T. is set to S.T.V. and the temperature of the environmental chamber is varied in 10 degree steps from -30 degrees C to +50 degrees C. The E.U.T. is allowed to stabilize at each temperature and the frequency is measured in 30 second intervals for a period of 5 minutes.
