

Re: Certification for Visteon  
Superregenerative Receiver  
PN: XW4T-13C791-AA  
FCC ID: NT8-13C791-DDM  
CANADA: to be provided by IC

### **Description**

The Remote Keyless Entry Module (RKEM) is programmed to be used on the 1999 D/EW98/X200. The RKEM is part of the Body Electronics subsystems comprised of the Front Electronic Module (FEM) and Rear Electronic Module (REM). The RKEM contains a Ultra High Frequency (315 MHz) receiver which receives unique data packets from a hand held transmitter that is associated with each RKEM. The signals are decoded and messages are sent to the other body modules over a communications bus utilizing the SAE J1850 multiplexing protocol. This communications bus is also used for module diagnostics.

### **Electrical Specification**

Operating Voltage: 9V to 16V  
Operating Temperature: -40C to 75C  
Sleep Current: 2.5mA  
Normal Operating Current: 25mA  
RKE operating frequency 315MHz

**EXHIBIT**   F
