RE: Visteon Corporation

FCC ID: NT8-315BUSTR

The following is in response to the comments made on the above referenced Application.

1) The EUT appears to include a daughter board. Please provide internal photographs of this board as well.

Our apologies, the daughter board photos have been uploaded.

2) On the RSP form, one model includes a lower case k. Is this intentional?

You are correct, the "k" should be a "K." The documentation has been corrected and re-submitted. Thank you.

3) Please explain the difference between the 3 models covered in this application.

There was a slight miscommunication at our end. The only difference between the models covered in this application is the plastic cases in which each model sits. All circuits and PCB boards are identical for all models. The test report has been modified to reflect this.
