SLA Features

The SLAP2X6 (Sense Line Assembly Plus) is an electronic module intended to monitor battery module cell groups voltages and module temperatures from the High Voltage battery bus in addition to activate cell balancing to improve battery cells life.

All cell voltages and module temperatures are reported directly to the VICM3 on a regular periodic basis via Wireless communication through the BRFM.

The SLAP2X6 implements a Cell Monitoring Unit board that uses a Pinnacle IC (ADRF8800), this is an IC that provides wireless communication between the Battery Cell Monitoring chip and the Battery Management System Controller.

SLAP2X6 operates in the frequency range 2.405 GHz - 2.480 GHz (ISM band) by using Wireless battery management technology.

Duty Cycle

SLAP2X6 can send 3 packets per 100ms + 3 packets (health reports) every minute.

With a path stability of 80%, this means $(30 \cdot 60 + 3) / 0.8 = 2253.75$ transmissions per minute or 37.5625 transmissions per second.

The max TX length is 1.016 ms

$37.5625 \text{ TX per second with each TX being } 1.016 \text{ ms} = \text{on for } 38.1 \text{ms every second} = 3.81\% \text{ of Duty Cycle.}$

The 27% Duty Cycle belongs to the Dual BRFM (FCC ID: NT8-BRFM/IC: 3043A-BRFM).

<p>Note: This section assumes that production software is not mandatory; the use of specialized software is acceptable. Note: Software diagnostic timers should be reset to minimum detection values, to facilitate assertion of potential diagnostic flags during the RF exposure time (maximum 2 seconds). Note: States/faults/issues shall be reported directly over the communication bus (i.e., Class 2, Controller Area Network (CAN), etc.) or indirectly if the communication bus is not available via the cycling of output(s) (e.g., PWM duty cycle change, telltale flash rate change, etc.)</p>																															

Note: Unless otherwise specified in the EMC Test Plan, in order to ensure a refreshed value, all information related to data monitoring (such as analog input voltages, operating states, etc.) shall be via parameter requests (e.g., Parameter ID (PID)) and not via scheduled, or periodic, broadcast messages. This ensures bi-directional communications during immunity testing.

The following information shall also be included in the case of radio equipment intentionally emitting radio waves:

- a. Frequency band : 2.405 – 2.480 GHz
- b. Maximum radio-frequency power transmitted in the frequency band(s) in which the radio equipment operates. Max output power = 10 dBm
