

American Telecommunications Certification Body Inc.  
6731 Whittier Ave, McLean, VA 22101

January 20, 2004

RE: Telematics Wireless Ltd.

FCC ID: NTAFP100SA

I have a few comments on the above referenced Application.

- 1) In regards to your previous response to item 5. The device also contains a 915 MHz SAW resonator that was not listed. Although this frequency is part of the transmitter (licensed), it also appears to function as part of the receiver (unlicensed), each applicable to their own limits. Additionally, 15.33(b)(1) discusses the highest frequency generated or used in the device or on which the device operates or tunes (MHz). Note that the device tunes to 915 MHz. Therefore, in a receive mode of operations, unless the device is a super-het. receiver as given by 15.33(b)(3), the ranges of measurements should follow this table. Therefore this gives an upper range of measurement of 5 GHz. Also note test requirements/setup typically specified by ANSI C63.4 Section 12, and 12.1.1.2.

A handwritten signature in black ink, appearing to read "Timothy R. Johnson", is written over a light blue horizontal line.

Timothy R. Johnson  
Examining Engineer
